The Power-Agile Multicomputer

Power-Agile Computing Challenges

- Selecting *component ensembles* for each application
- Measuring application efficiency
- Predicting *ensemble* performance for a given application
- Executing transitions between ensembles
- Increased device complexity and cost

Benevolent Dictator

Peaceful Buddha

Power-Agile Computing

Opportunity:

A device composed of *multiple heterogeneous components* allows power to be flexibly allocated across subsystems in ways that improve application performance while reducing overall power usage.

Challenges:

- *Measuring* application efficiency
- *Predicting* ensemble performance for a given application
- *Selecting* component ensembles for each application
- *Executing* transitions between ensembles
- Increased device complexity and cost
