Message from the Program Co-Chairs........................................................................................................ii

Thursday, June 19

Big Data

ShuffleWatcher: Shuffle-aware Scheduling in Multi-tenant MapReduce Clusters.........................................................1
Faraz Ahmad, Teradata Aster and Purdue University; Srimat T. Chakradhar, NEC Laboratories America;
Anand Raghunathan and T. N. Vijaykumar, Purdue University

Violet: A Storage Stack for IOPS/Capacity Bifurcated Storage Environments.........................................................13
Douglas Santry and Kaladhar Voruganti, NetApp, Inc.

ELF: Efficient Lightweight Fast Stream Processing at Scale............................................................................................25
Liting Hu, Karsten Schwan, Hrishikesh Amur, and Xin Chen, Georgia Institute of Technology

Exploiting Bounded Staleness to Speed Up Big Data Analytics......................................................................................37
Henggang Cui, James Cipar, Qirong Ho, Jin Kyu Kim, Seunghak Lee, Abhimanu Kumar, Jinliang Wei,
Wei Dai, and Gregory R. Ganger, Carnegie Mellon University; Phillip B. Gibbons, Intel Labs; Garth A. Gibson
and Eric P. Xing, Carnegie Mellon University

Making State Explicit for Imperative Big Data Processing..............................................................................................49
Raul Castro Fernandez, Imperial College London; Matteo Migliavacca, University of Kent; Evangelia Kalyvianaki,
City University London; Peter Pietzuch, Imperial College London

Virtualization

OSv—Optimizing the Operating System for Virtual Machines..........................................................................................61
Avi Kivity, Dor Laor, Glauber Costa, Pekka Enberg, Nadav Har’El, Don Marti, and Vlad Zolotarov,
Cloudius Systems

Gleaner: Mitigating the Blocked-Waiter Wakeup Problem for Virtualized Multicore Applications.................................73
Xiaoning Ding, New Jersey Institute of Technology; Phillip B. Gibbons and Michael A. Kozuch, Intel Labs
Pittsburgh; Jianchen Shan, New Jersey Institute of Technology

HYPERSHELL: A Practical Hypervisor Layer Guest OS Shell for Automated In-VM Management.................................85
Yangchun Fu, Junyuan Zeng, and Zhiqiang Lin, The University of Texas at Dallas

XvMotion: Unified Virtual Machine Migration over Long Distance..................................................................................97
Ali José Mashtizadeh, Stanford University; Min Cai, Gabriel Tarasuk-Levin, and Ricardo Koller, VMware, Inc.;
Tal Garfinkel; Sreekanth Setty, VMware, Inc.

GPUvm: Why Not Virtualizing GPUs at the Hypervisor?.............................................................................................109
Yusuke Suzuki, Keio University; Shinpei Kato, Nagoya University; Hiroshi Yamada, Tokyo University of
Agriculture and Technology; Kenji Kono, Keio University

A Full GPU Virtualization Solution with Mediated Pass-Through..............................................................................121
Kun Tian, Yaozu Dong, and David Cowperthwaite, Intel Corporation

(Thursday, June 19, continues on p. iv)
Distributed Systems

Gestalt: Fast, Unified Fault Localization for Networked Systems ................................................... 255
Radhika Niranjan Mysore, Google; Ratul Mahajan, Microsoft Research; Amin Vahdat, Google;
George Varghese, Microsoft Research

Insight: In-situ Online Service Failure Path Inference in Production Computing Infrastructures ....... 269
Hiep Nguyen, Daniel J. Dean, Kamal Kc, and Xiaohui Gu, North Carolina State University

Automating the Choice of Consistency Levels in Replicated Systems ........................................... 281
Cheng Li, Max Planck Institute for Software Systems (MPI-SWS); Joao Leitão, NOVA University of Lisbon/
CITI/NOVA-LINCS; Allen Clement, Max Planck Institute for Software Systems (MPI-SWS); Nuno Preguiça and
Rodrigo Rodrigues, NOVA University of Lisbon/CITI/NOVA-LINCS; Viktor Vafeiadis, Max Planck Institute for
Software Systems (MPI-SWS)

Sirius: Distributing and Coordinating Application Reference Data .................................................. 293
Michael Bevilacqua-Linn, Maulan Byron, Peter Cline, Jon Moore, and Steve Muir, Comcast Cable

In Search of an Understandable Consensus Algorithm ................................................................. 305
Diego Ongaro and John Ousterhout, Stanford University

Networking

GASPP: A GPU-Accelerated Stateful Packet Processing Framework ............................................. 321
Giorgos Vasiliadis and Lazaros Koromilas, FORTH-ICS; Michalis Polychronakis, Columbia University;
Sotiris Ioannidis, FORTH-ICS

Panopticon: Reaping the Benefits of Incremental SDN Deployment in Enterprise Networks ............ 333
Dan Levin, Technische Universität Berlin; Marco Canini, Université catholique de Louvain; Stefan Schmid,
Technische Universität Berlin and Telekom Innovation Labs; Fabian Schaffert and Anja Feldmann, Technische
Universität Berlin

Programmatic Orchestration of WiFi Networks .............................................................................. 347
Julius Schulz-Zander, Lalith Suresh, Nadi Sarrar, and Anja Feldmann, Technische Universität Berlin;
Thomas Hühn, DAI-Labor and Technische Universität Berlin; Ruben Merz, Swisscom

HACK: Hierarchical ACKs for Efficient Wireless Medium Utilization ............................................. 359
Lynne Salameh, Astrit Zhushi, Mark Handley, Kyle Jamieson, and Brad Karp, University College London

Pythia: Diagnosing Performance Problems in Wide Area Providers ............................................. 371
Partha Kanuparthi, Yahoo Labs; Constantine Dovrolis, Georgia Institute of Technology

BISmark: A Testbed for Deploying Measurements and Applications in Broadband Access Networks ... 383
Srikanth Sundaresan, Sam Burnett, and Nick Feamster, Georgia Institute of Technology; Walter de Donato,
University of Naples Federico II

Security and Correctness

Application-Defined Decentralized Access Control ................................................................. 395
Yuanzhong Xu and Alan M. Dunn, The University of Texas at Austin; Owen S. Hofmann, Google, Inc.; Michael
Z. Lee, Syed Akbar Mehdi, and Emmett Witchel, The University of Texas at Austin

MiniBox: A Two-Way Sandbox for x86 Native Code ................................................................ 409
Yanlin Li, CyLab/Carnegie Mellon University; Jonathan McCune and James Newsome, CyLab/Carnegie Mellon
University and Google, Inc.; Adrian Perrig, CyLab/Carnegie Mellon University; Brandon Baker and Will
Drewry, Google, Inc.

(Friday, June 20, continues on p. vi)
Static Analysis of Variability in System Software: The 90,000 #ifdefs Issue .................................................. 421
Reinhard Tartler, Christian Dietrich, Julio Sincero, Wolfgang Schröder-Preikschat, and Daniel Lohmann,
Friedrich-Alexander-Universität Erlangen-Nürnberg

Yat: A Validation Framework for Persistent Memory Software .................................................. 433
Philip Lantz, Subramanya Dulloor, Sanjay Kumar, Rajesh Sankaran, and Jeff Jackson, Intel Labs

Medusa: Managing Concurrency and Communication in Embedded Systems .......................... 439
Thomas W. Barr and Scott Rixner, Rice University

Flash

Reliable Writeback for Client-side Flash Caches ................................................................. 451
Dai Qin, Angela Demke Brown, and Ashvin Goel, University of Toronto

Flash on Rails: Consistent Flash Performance through Redundancy .................................. 463
Dimitris Skourtis, Dimitris Achlioptas, Noah Watkins, Carlos Maltzahn, and Scott Brandt, University of California, Santa Cruz

I/O Speculation for the Microsecond Era .............................................................................. 475
Michael Wei, University of California, San Diego; Matias Bjørling and Philippe Bonnet, IT University of Copenhagen; Steven Swanson, University of California, San Diego

OS I/O Path Optimizations for Flash Solid-state Drives .......................................................... 483
Woong Shin, Qichen Chen, Myoungwon Oh, Hyeonsang Eom, and Heon Y. Yeom, Seoul National University

FlexECC: Partially Relaxing ECC of MLC SSD for Better Cache Performance ................. 489
Ping Huang, Virginia Commonwealth University and Huazhong University of Science and Technology; Pradeep Subedi, Virginia Commonwealth University; Xubin He, Virginia Commonwealth University; Shuang He and Ke Zhou, Huazhong University of Science and Technology

Nitro: A Capacity-Optimized SSD Cache for Primary Storage ............................................. 501
Cheng Li, Rutgers University; Philip Shilane, Fred Dougis, Hyong Shim, Stephen Smaldone, and Grant Wallace, EMC Corporation
