Customer No: 2020 – 071 - 230
The Network Security Policy implemented for this Facility requires Customer(s) adherence to several necessary precautions in order for Smart City to maintain a healthy, viable network for all Customers. This declaration of compliance with the security requirements as noted herein is an acknowledgement of Smart City’s filtering policies and must be completed, signed by an authorized Customer representative and mailed or faxed to Smart City prior to the requested network service(s) being activated for Customer’s usage.

Network Security Policy:

Smart City requires that all devices directly or indirectly accessing Smart City’s network(s) have the latest virus scan software, Windows® security updates, system patches, and any other technological precautions necessary to protect the Customer(s) and others from viruses, malicious programs, and other disruptive applications. Any device(s) which adversely impacts Smart City’s network(s) may cause service interruptions to Customer(s) which can lead to disconnection of the Customer’s equipment from the network(s), with or without prior notice at Smart City’s sole discretion. The device(s) in question will remain disconnected until all issues are adequately resolved. All charges will apply and no refunds will be given. Additional charges may apply for trouble diagnosis and/or problem resolution.

Smart City has implemented filtering policies on all Internet routers. These filters block all inbound Internet Control Message Protocol (ICMP) -- Ping, Traceroute, etc. -- destined to any Smart City Network(s). Smart City understands that Ping and Traceroute are valuable troubleshooting tools; therefore Smart City’s Policy does allow ICMP (Ping & Traceroute) packets sourced from any Smart City network(s).

Further, Smart City has implemented filters on the following TCP and UDP port numbers: UDP – 137, 138, 402, 1434 and TCP – 135, 139, 402, 445, 4444.

Customers requiring inbound or outbound access to any of the filtered ports, should contact a Smart City customer service representative in advance of the event with details of the specific requirements so that Smart City may consider the potential of a customized alternative.

Each Customer’s business is important to Smart City and with advanced and timely notification of a Customer’s needs we are confident that we can provide network services that perform as expected for all clients.

Please inform all show site personnel about the importance of Smart City’s Network Security compliance issues. Services are activated after Smart City is in receipt of this signed declaration of compliance with our network security requirements.

With execution of this document the Customer hereby attests that Customer provided equipment, which will be connected to Smart City’s network(s) at the above noted Facility and Show / Event has been properly protected, contains anti-virus software, and the latest patches and security updates have been installed. Customer(s) also accepts the responsibility for the performance of Customer’s equipment and understands the conditions placed on service delivery by this document as well as the potential that additional charges may be incurred should Customer’s equipment be found to adversely impact Smart City’s network(s) performance. The Customer acknowledges that this Network Security Declaration is part of the Customer Contract allowing Smart City to provide requested service(s) and is subject to change without notice.

Voice and Data communications cabling. Smart City is the exclusive installer of Voice and Data communications cabling. Smart City provides cabling to booths, within booths (under carpet and flooring) and from booth-to-booth. Fiber Optic, twisted pair (Category 3, 5 and 6), coaxial and all other data and telecommunication cable fall under Smart City’s area of expertise.

IMPORTANT!! Prior to installation of service, a complete floor plan is required. Please utilize this grid should you not have your own floor plan to send us. You may use a different floor plan for each service group (Telephone, Internet, etc.) or combine all services on one floor plan. For a floor plan to be considered complete it must include all the information listed below (Main Distribution Location “MDL”, designated location of items within the booth, surrounding booths, scale-length and width).

### Grid Instructions

- **X** = Main Distribution Location (MDL) – The originating line(s) for service, whether from overhead, a floor pocket or a column, will be delivered to a “MDL” before being distributed within your booth. Example: Storage area, back of booth, etc. (unless specified, the default for the “MDL” will be the back of the booth or at Smart City’s discretion, the most convenient location). All distribution of services to their final destination within the booth will originate from the “MDL”. A per line move fee will apply to relocate services within your booth after they have been engineered and / or installed.

- **T** = Location of Telephones, Fax lines or other telecommunications equipment “T”.

- **I / H / PC / C** = Location of primary Internet Service “I”, Hubs “H”, Patch Cables “PC” and / or Computers “C”. For Smart City to perform your floor work, you will need to indicate the location of each item you want cabled. Make sure to order your floor work, hubs, and patch cables early and in advance of the show moving in.

- **Orientation** = The Booth or Aisle #’s surrounding your booth. A minimum of one surrounding Booth or Aisle # is required (two or more would be more helpful) for Smart City to accurately install your services.

- **Size** = Booth dimensions (example 10x10) _______________. **Scale** = 1 Box is equal to __________ ft.
