

“We Can’t Live Without Them!” App Developers’ Adoption of Ad Networks and Their Considerations of Consumer Risks

Abraham Mhaidli, Yixin Zou, Florian Schaub
University of Michigan School of Information

50% of mobile apps use ads
(and by extension, advertising networks)

App developers
with an app

Advertising
Networks

Google Ad Mob
InMobi
StartApp

Advertisers with
ads to show

Developer

Through SDK provided
by ad network

Ad Network

Receives data from app

Developer

Through SDK provided
by ad network

Receives data from app

Puts specific ad in

Ad Network

Can control:

- Category of ad
- Data sent to ad network
- Targeted ads or not

Ads are great! ... or are they?

PERVASIVE DATA
COLLECTION

MALWARE

ANNOYING

CONSUMERISM

Proposals have been put forward to manage these risks...

... but little is known about how app developers reason about and integrate ads.

Related Work

Consumer risks of advertising networks (Borgesius, 2015)

Developer Behaviors

Information Seeking (King et al, 94; Shilton and Greene, 2017)

Tool Selection (Xiao et al., 2014; Witschey et al., 2015)

Privacy and Security Behaviors (Balebako et al, 2014; Acar et al. 2017)

Areas of Focus

1. Why do developers choose to use advertising?

2. How do they choose an advertising network?

3. How do they configure ads in their app?

4. How do they manage consumer risks?

Method

Mixed Method: Survey and Interview

Survey

App experience

Advertising network usage

Behaviors & Attitudes

Interview

In depth probing regarding rationale of behaviors.

Participant Demographics

App developers who had
monetized their apps through
advertising

49 for survey; 10 for interview

Mostly small independent app
developers

Findings

Areas of Focus

1. Why do developers choose to use advertising?

2. How do they choose an advertising network?

3. How do they configure ads in their app?

4. How do they manage consumer risks?

Advertising is Key (Survey)

40% of participants only used advertising as a monetization model

Ads seen as
necessity
(Interview)

*“If it wasn’t for advertising,
almost all the independent
developers would basically
just die.”*

BUT dissatisfied with revenue

All small independent
app developers
complained about
revenue being too low
(Interview)

Revenue main reason
for switching ad
networks
(Survey)

Areas of Focus

1. Why do developers choose to use advertising?

2. How do they choose an advertising network?

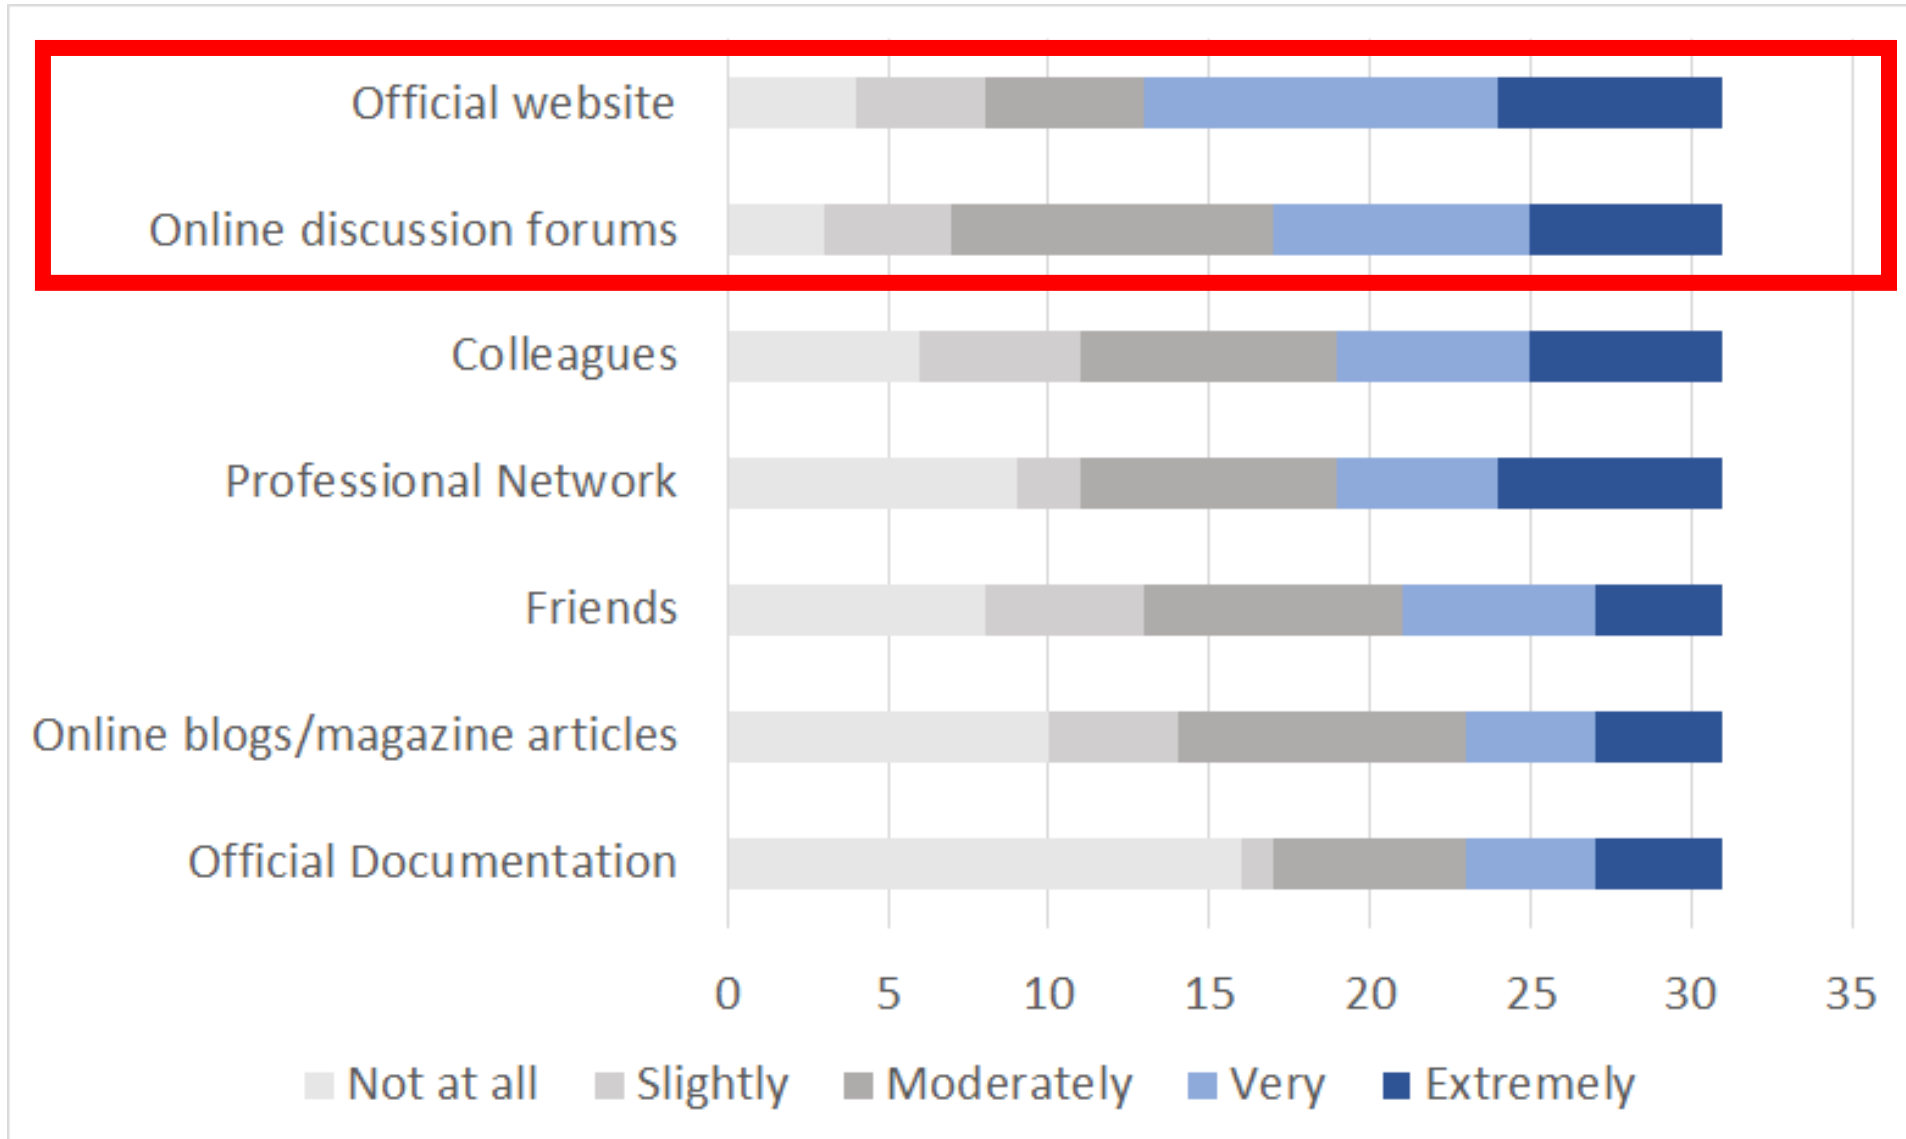

3. How do they configure ads in their app?

4. How do they manage consumer risks?

Website and Forums Important (Survey)

Developers do
not really
research what ad
network to use
(Interview)

Rough Heuristics

Website

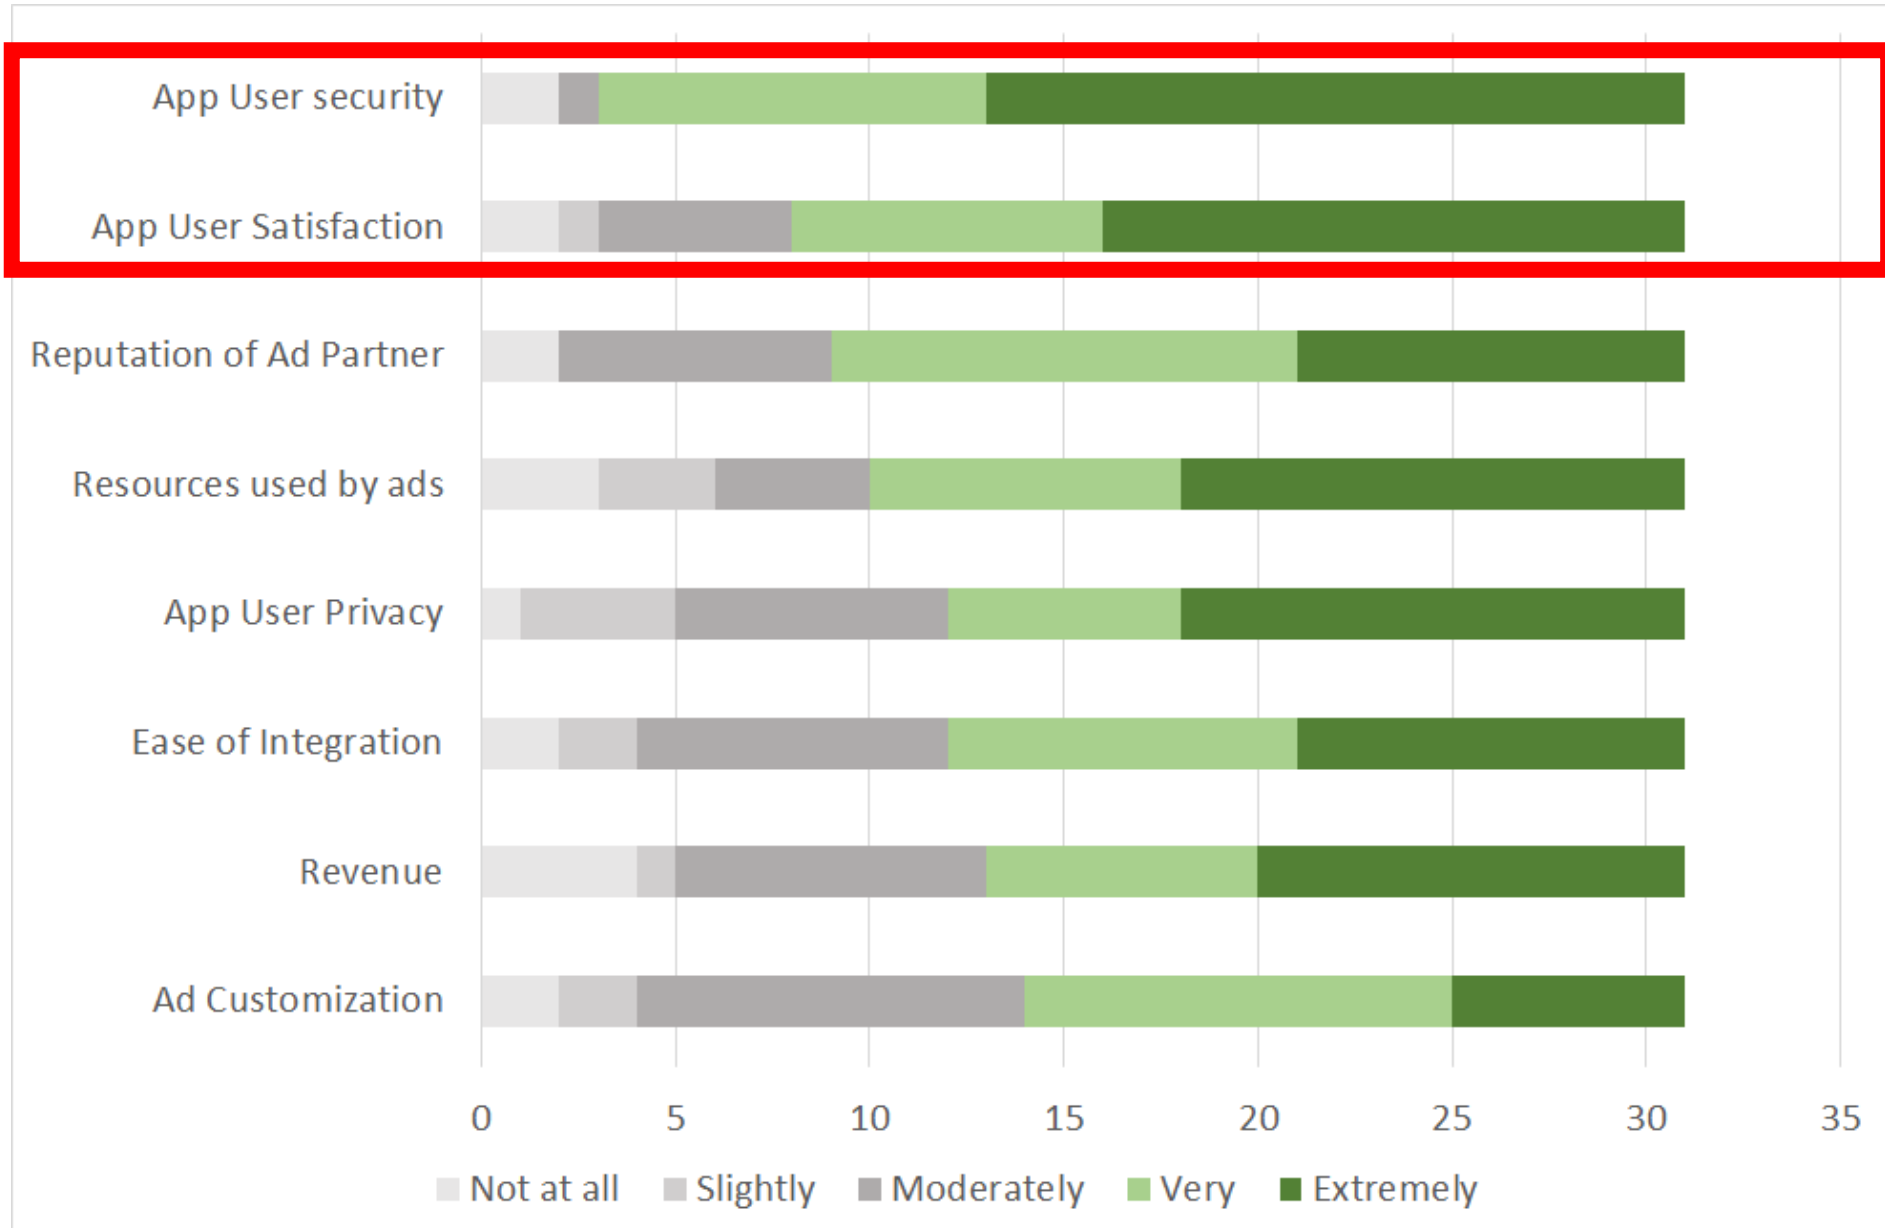

Looks Ok

Try it

Works why not

Rarely change ad network, unless
broken.

App developers claim to value users (Survey)

But other factors valued when choosing an ad network (Survey and Interview)

100% of participants who switched ad networks did so for revenue

Interviews: Ease of integration emphasized the most

Tension

Developers want
better user security
and user experience...

...but need money and
ability to implement
ads easily

Areas of Focus

1. Why do developers choose to use advertising?

2. How do they choose an advertising network?

3. How do they configure ads in their app?

4. How do they manage consumer risks?

Stick to defaults (Interview)

Even when it goes against their financial interests or their wish to have privacy preserving apps

For example, contradictions between showing targeted ads but not maximizing the data that is sent.

Areas of Focus

1. Why do developers choose to use advertising?

2. How do they choose an advertising network?

3. How do they configure ads in their app?

4. How do they manage consumer risks?

Advertising network responsible for fixing consumer risks (Survey and Interview)

50% of survey said ad networks
'completely responsible' for fixing
consumer issues

In interview, express little agency
and responsibility

Summary of Findings

Use advertising mostly out of resignation

Don't spend too much time researching what advertising networks to use

Stick to default settings even when it goes against financial or privacy preserving interests

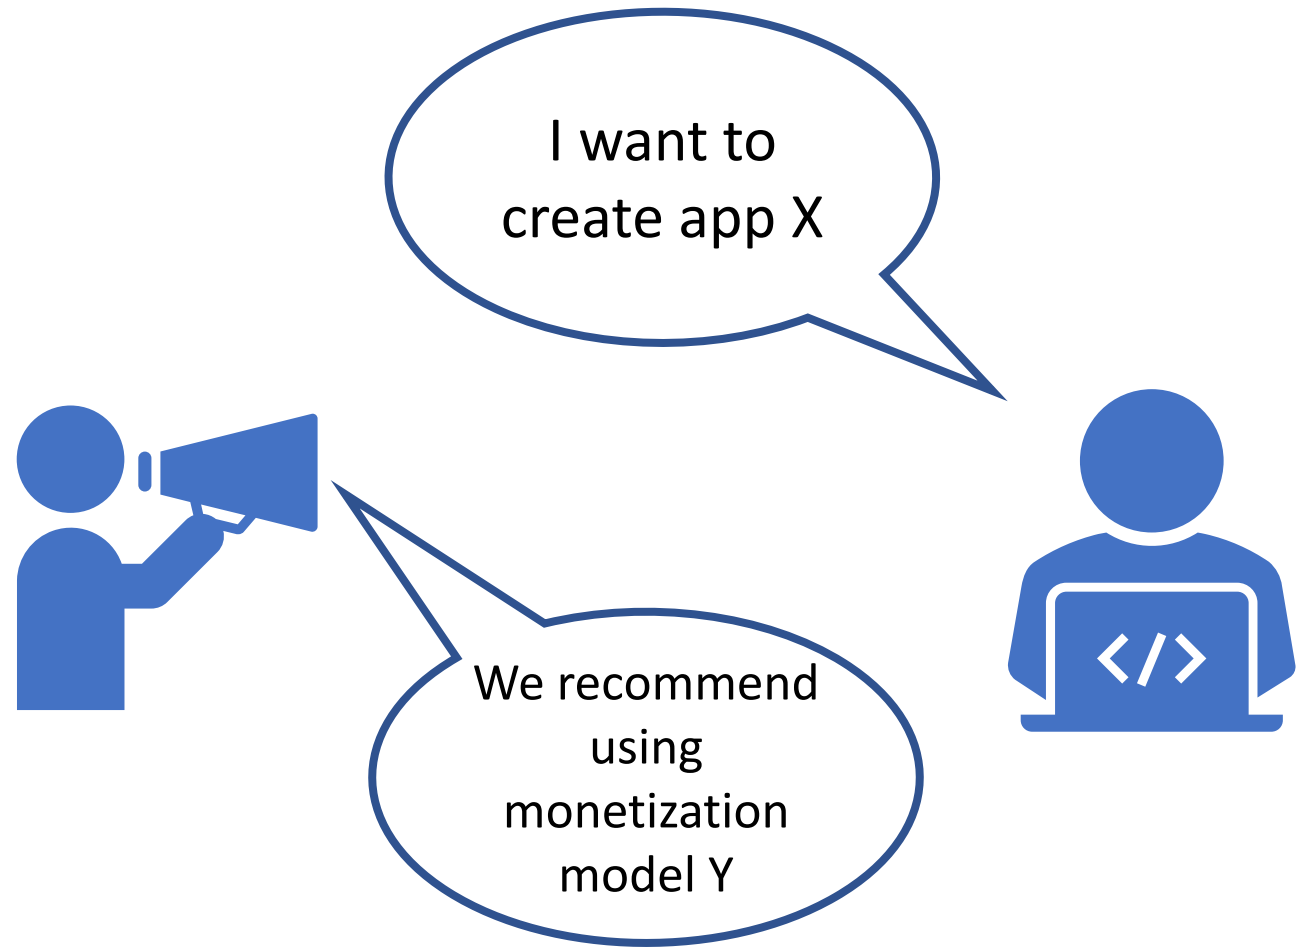

Believe it is not their responsibility to fix issues with advertising networks

Opportunities for future work

Support Developers in Choosing App Monetization Models

More information on
monetization models needed

Rethink Ad Network Defaults

Mandate ad networks to change defaults to consumer-friendly settings

Encourage
Developer
Responsibility

Positive Responsibility

Classes

Incentives

Mobile App Developers...

Use advertising out of resignation and belief of necessity

More accurate information about monetization models needed

Stick with default settings

Mandate ad networks to have consumer-friendly defaults

Think it is ad networks responsibility to manage risks

Encourage positive responsibility through classes and incentives for developers
