1. You can **totally** do this!
2. SRE is about clear focus on overall system reliability, and balancing the allocation of engineering resources more effectively and with reduced conflict through homeostatic feedback.

1. You can **totally** do this!
2. We have people come ask us what takes to be an SRE and we tell them—if you're working in a DevOps paradigm, you already have the technical skill set to be an SRE. We're no different as individuals. What IS different is the healthy feedback system we've built for balancing the allocation of engineering resources more effectively and with reduced conflict.
