

# HetPipe: Enabling Large DNN Training on (Whimpy) Heterogeneous GPU Clusters through Integration of Pipelined Model Parallelism and Data Parallelism

#### Jay H. Park,

Gyeongchan Yun, Chang M. Yi, Nguyen T. Nguyen, Seungmin Lee, Jaesik Choi<sup>+</sup>, Sam H. Noh, and Young-ri Choi

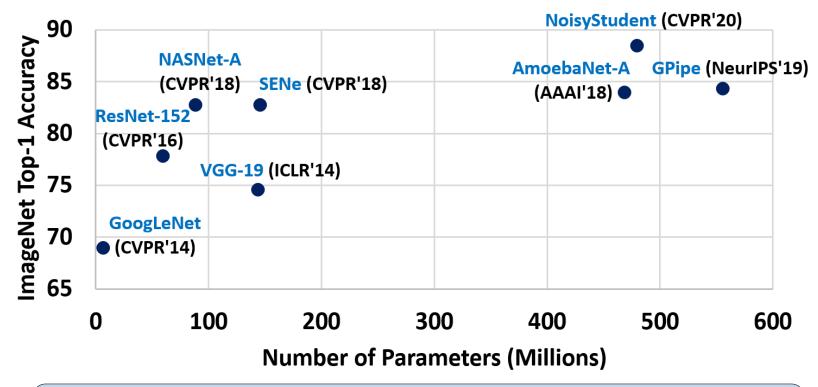

#### Contents

- Motivation & Background
- HetPipe in a Nutshell
- Our System: HetPipe
- Evaluation
- Conclusion

#### Motivation

DNN (Deep Neural Network) models continue to grow

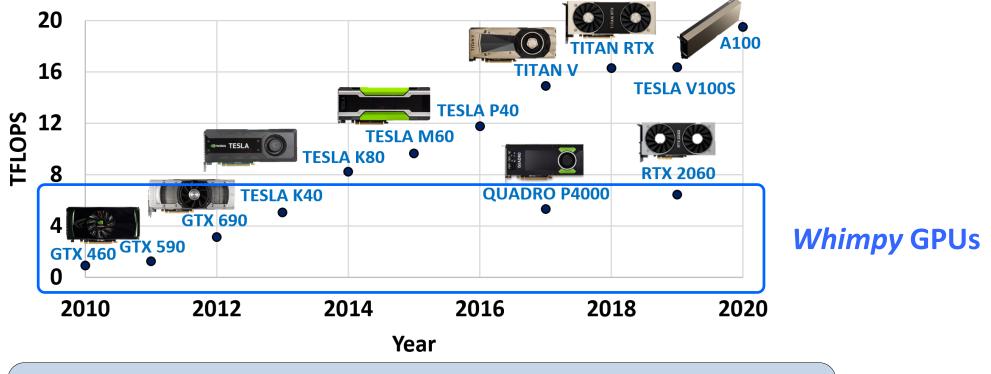

• Need more powerful GPUs for training!

#### Motivation

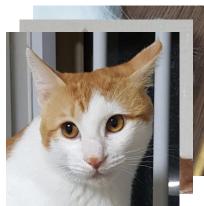

Short release cycle of new GPU architectures

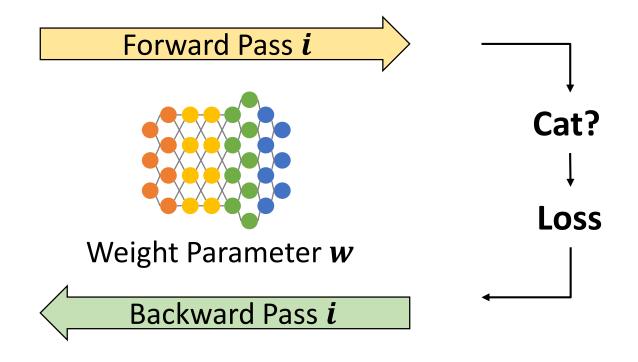

- Use of heterogeneous GPUs is inevitable!
- What to do with *whimpy* GPUs?

### **DNN Training**

Minibatch *i* (Training Data)

 $w_{i+1} = w_i - \eta \cdot u_i$ 

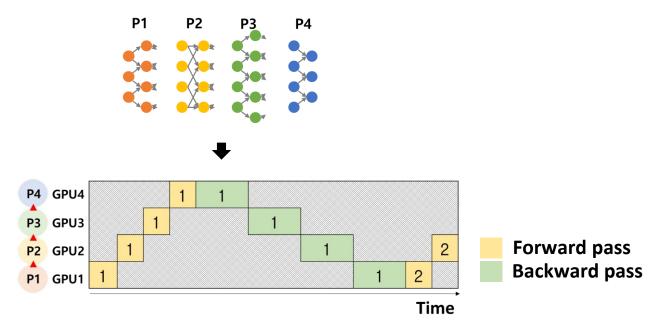

# **Parallelizing DNN Training**

Data parallelism (DP)

• GPU memory limitation

# Model parallelism (MP)

Low GPU utilization

# **Parallelizing DNN Training**

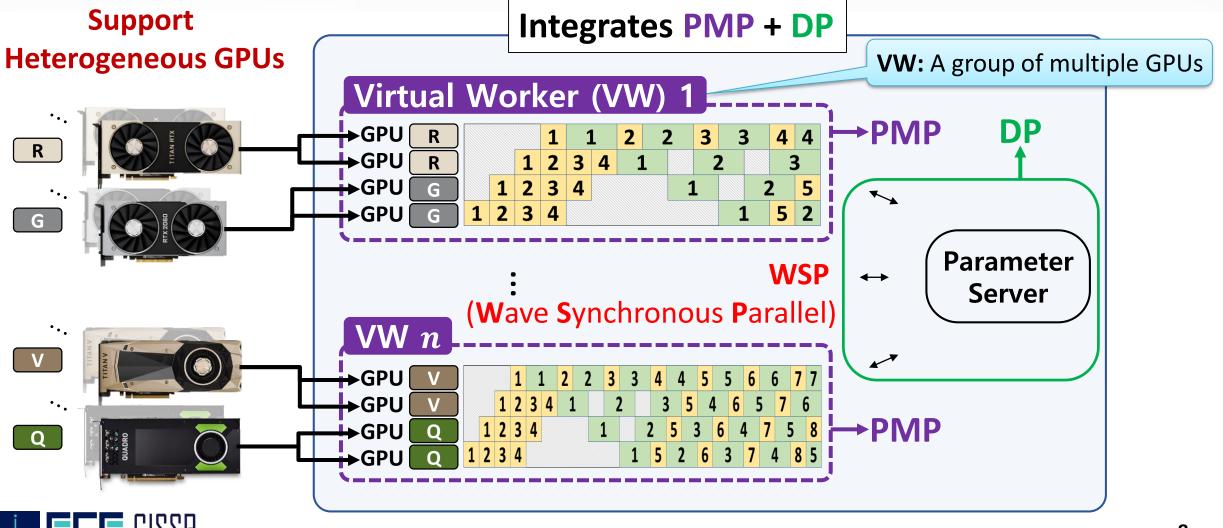

# Attempts to improve MP utilization

- Pipelined model parallelism (PMP)
  - **PMP Worker** GPU4 GPU3 GPU2 GPU1 Forward pass **Backward pass** Time
    - Designed for homogeneous GPUs
    - Designed for a single PMP worker

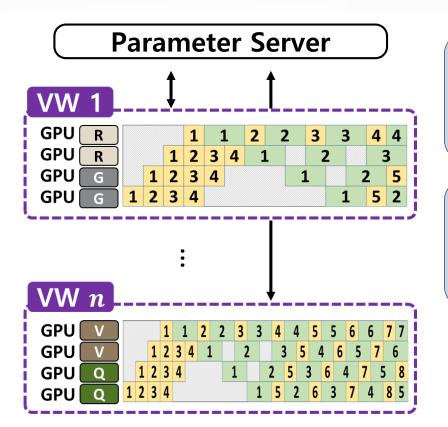

- PipeDream [SOSP'19]
- GPipe [NIPS'19]

#### **HetPipe in a Nutshell**

# **Challenges in integration PMP+DP in Heterogeneous GPUs**

- What weight version should be used by each VW to synchronize with other VWs?
- How do we reduce virtual worker stragglers when we consider DP?

Many more in the paper

#### **HetPipe Contributions**

Enable Large DNN Training on Heterogeneous GPUs Aggregate heterogeneous resources Reduce the straggler problem

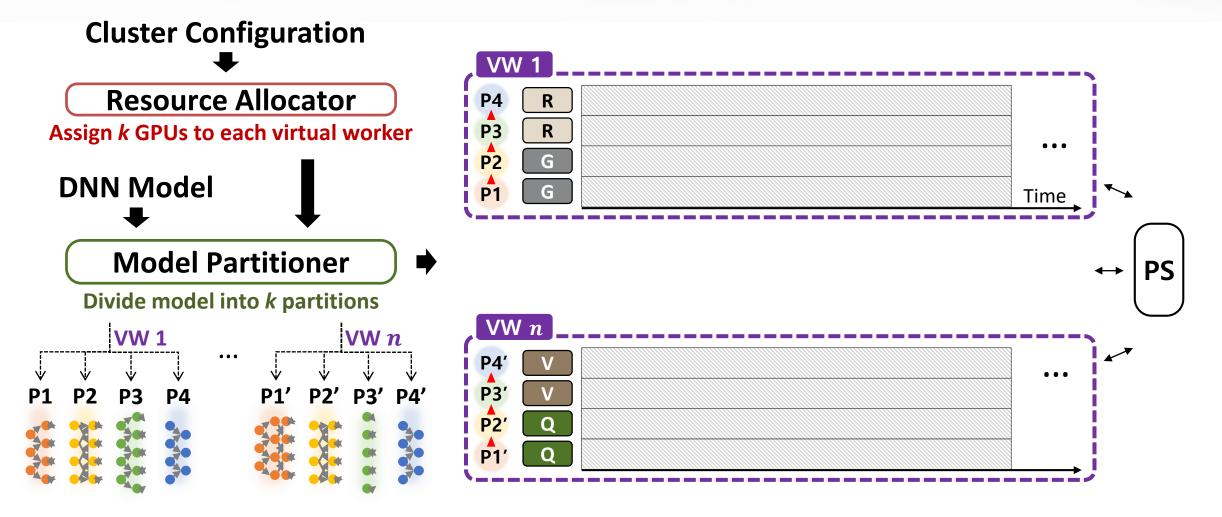

# **Integrates PMP + DP**

Novel parameter synchronization model WSP (Wave Synchronous Parallel)

# **Proof of WSP Convergence**

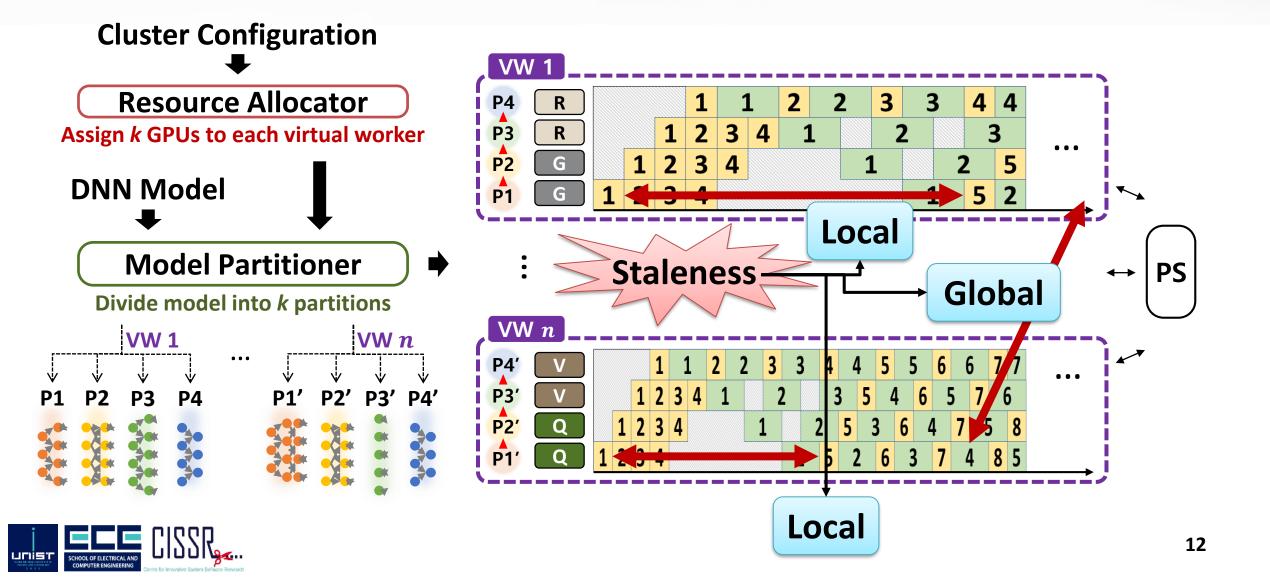

### **HetPipe Workflow**

#### **HetPipe Workflow**

#### Outline

- Motivation & Background
- HetPipe in a Nutshell
- Our System: HetPipe
  - Pipelined Model Parallelism Within a VW
  - Data Parallelism with Multiple VWs
- Evaluation
- Conclusion

# Execution of a virtual worker

 $N_m$  minibatches processed concurrently in pipeline manner

W<sub>local</sub>

 $W_{local}$  is a consistent version of weights within a VW

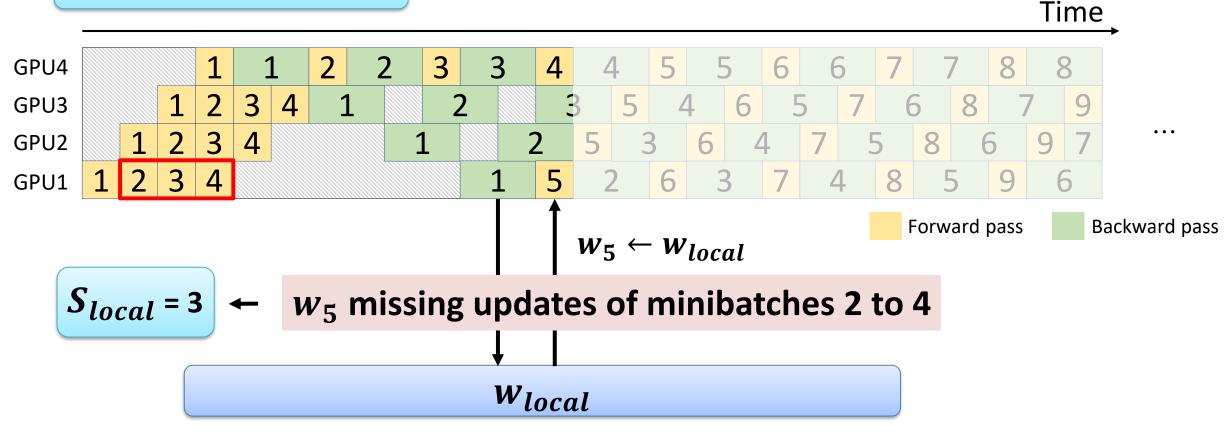

# Weight management procedure

 $w_{local} \leftarrow w_{local} + u_1$ 

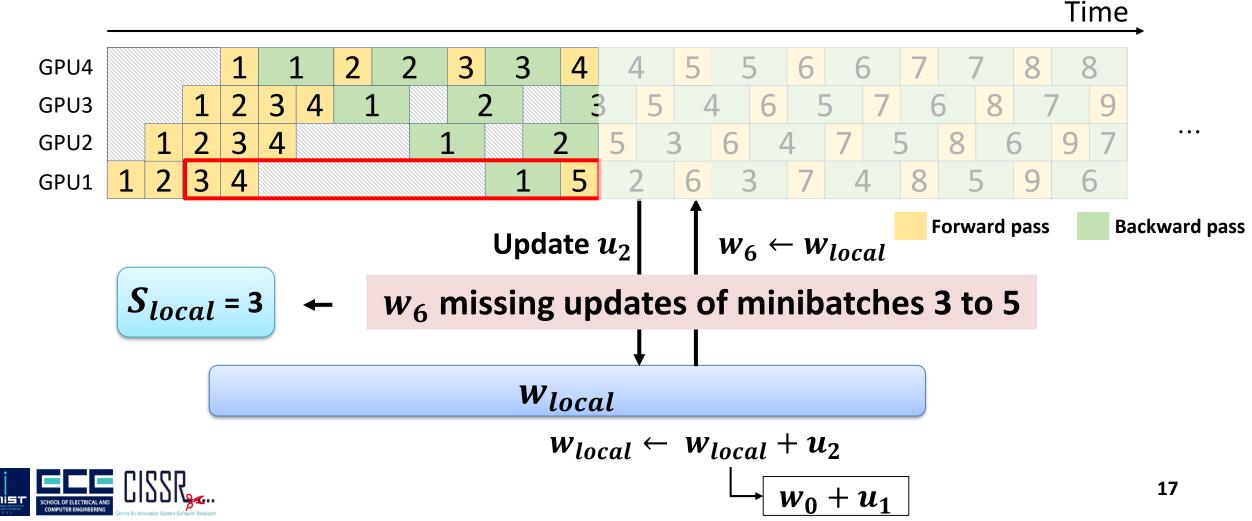

# Local staleness (S<sub>local</sub>): maximum missing updates

 $w_{local} \leftarrow w_{local} + u_1$ 

# Local staleness (S<sub>local</sub>): maximum missing updates

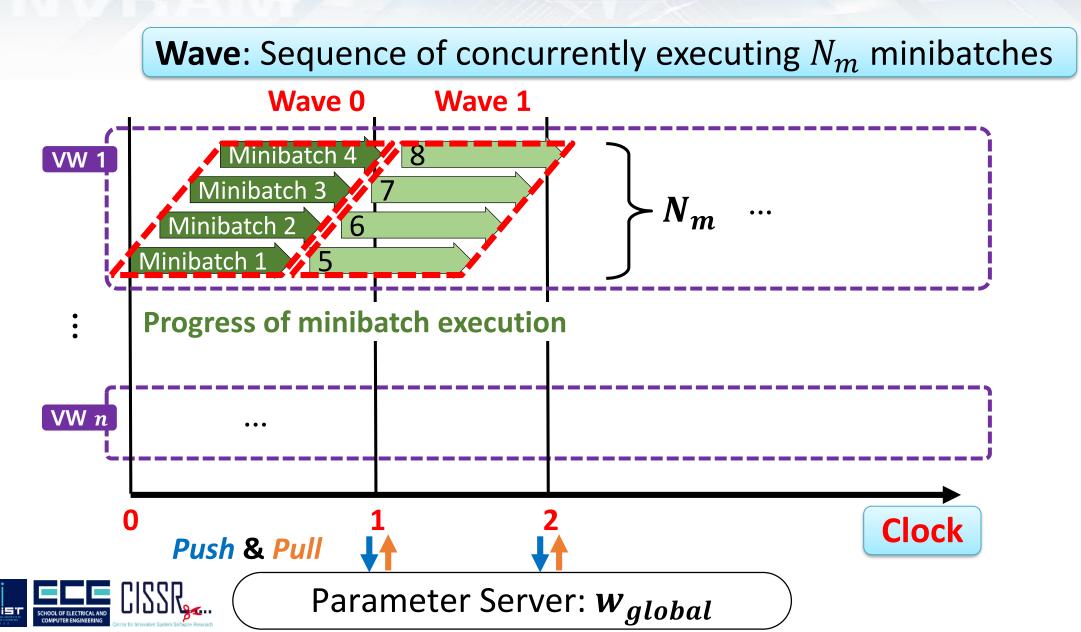

#### Outline

- Our System: HetPipe

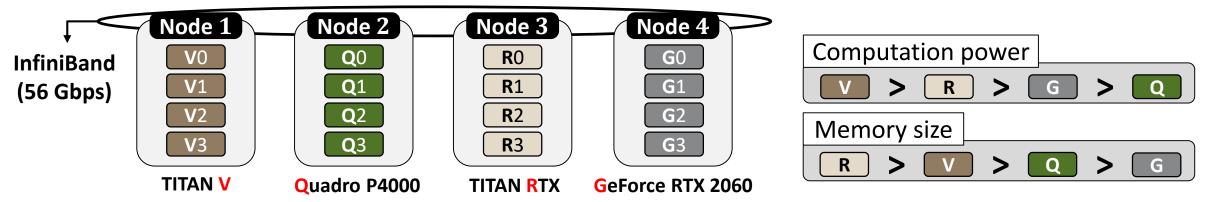

# Evaluation

- Setup
- Resource Allocation for Virtual Workers
- Results
- Conclusion

#### **Evaluation Setup**

#### Cluster setup - 4 heterogeneous GPU nodes

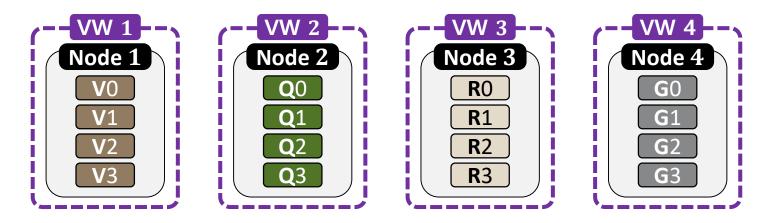

# Two DNN models

	ResNet-152	VGG-19
Dataset, minibatch size	ImageNet, 32	
Model parameter size	230 MB	548 MB
Characteristic	Large activation output	Large parameter size

# **Resource Allocation for Virtual Workers: NP, ED, HD**

# NP (Node Partition)

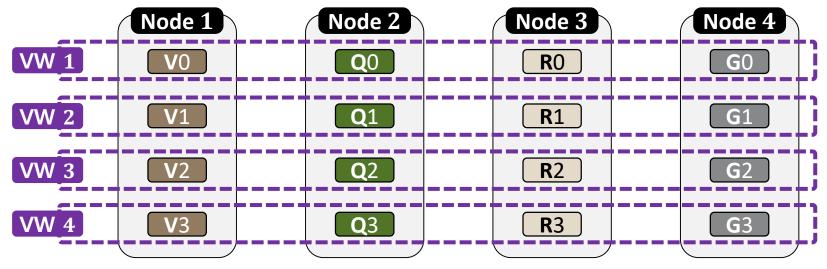

- Minimum communication overhead within VW
- Performance of each virtual worker varies
- Straggler may degrade performance with DP

# **Resource Allocation for Virtual Workers: NP, ED, HD**

### ED (Equal Distribution)

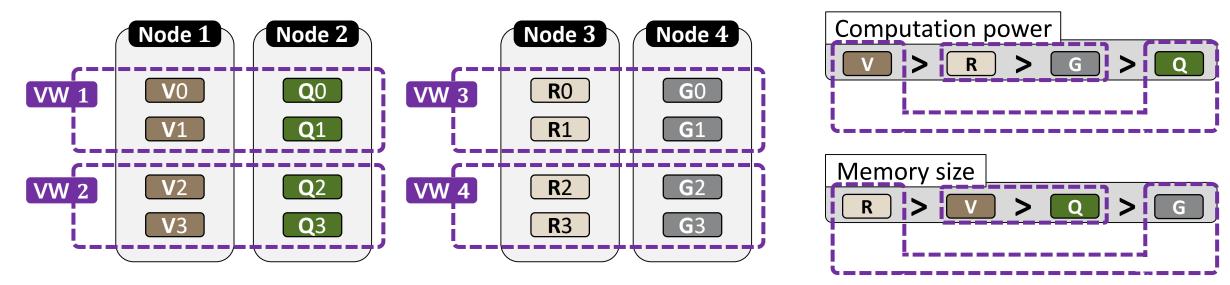

- Performance will be the same across the VWs
- Mitigates the straggler problem
- High communication overhead within each VW

# **Resource Allocation for Virtual Workers: NP, ED, HD**

# HD (Hybrid Distribution)

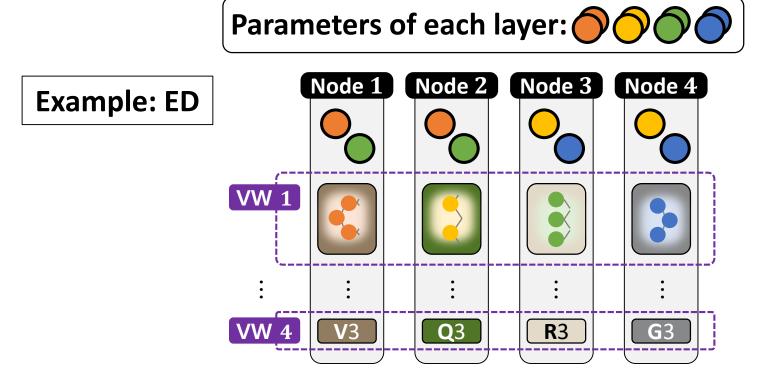

- Mitigates the straggler problem
- Reduces communication overhead within each VW

#### **Parameter Placement**

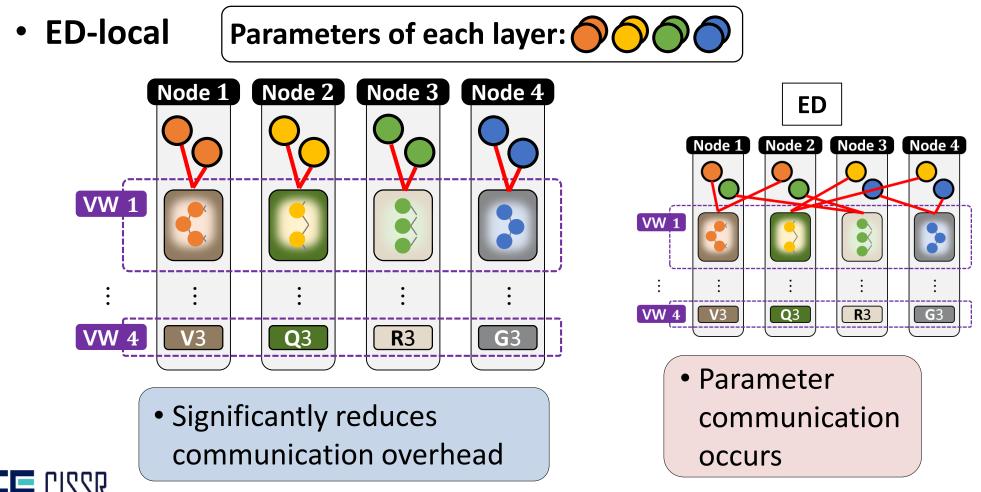

- Round-robin policy (default)
  - Can be used in all three policies: NP, ED, and HD

#### **Parameter Placement**

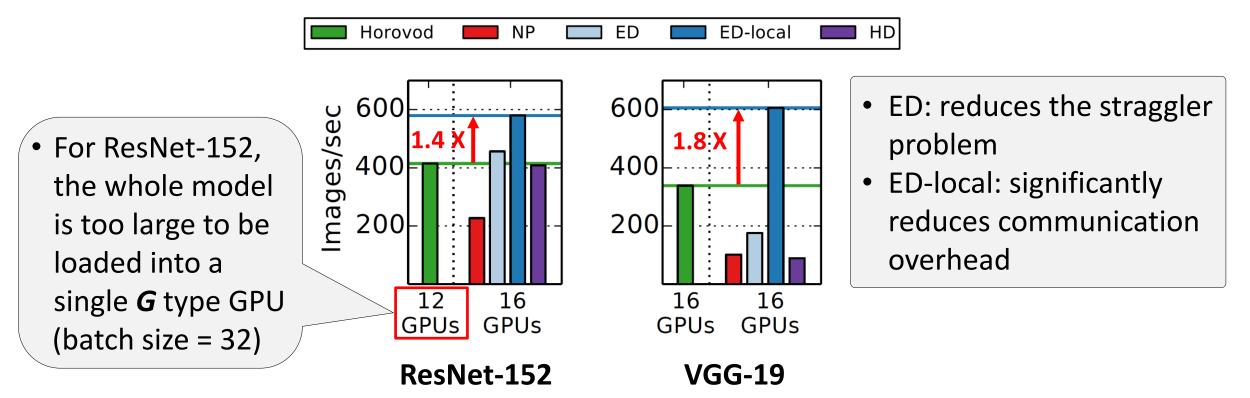

Local placement policy

# **Compare Throughput with Horovod**

# Baseline Horovod

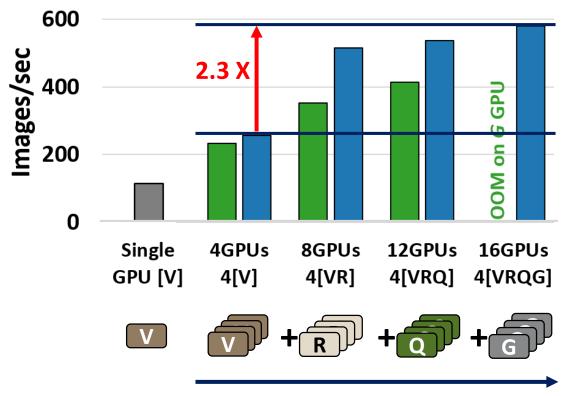

• State-of-the-art DP using AllReduce

# **Performance Improvement of Adding Whimpy GPUs**

#### ResNet-152

Adding whimpy GPUs

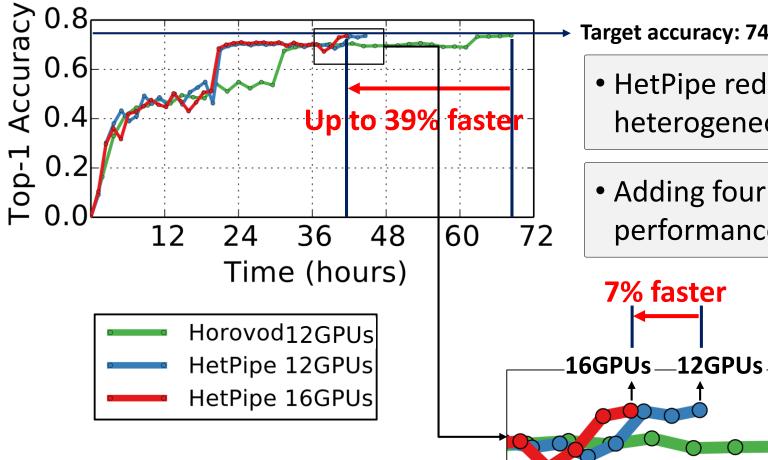

# ■ Single GPU ■ Horovod ■ HetPipe

- With additional GPUs, HetPipe achieves up to 2.3X speed up
- Additional whimpy systems allow for faster training

### **Convergence Results**

#### ResNet-152

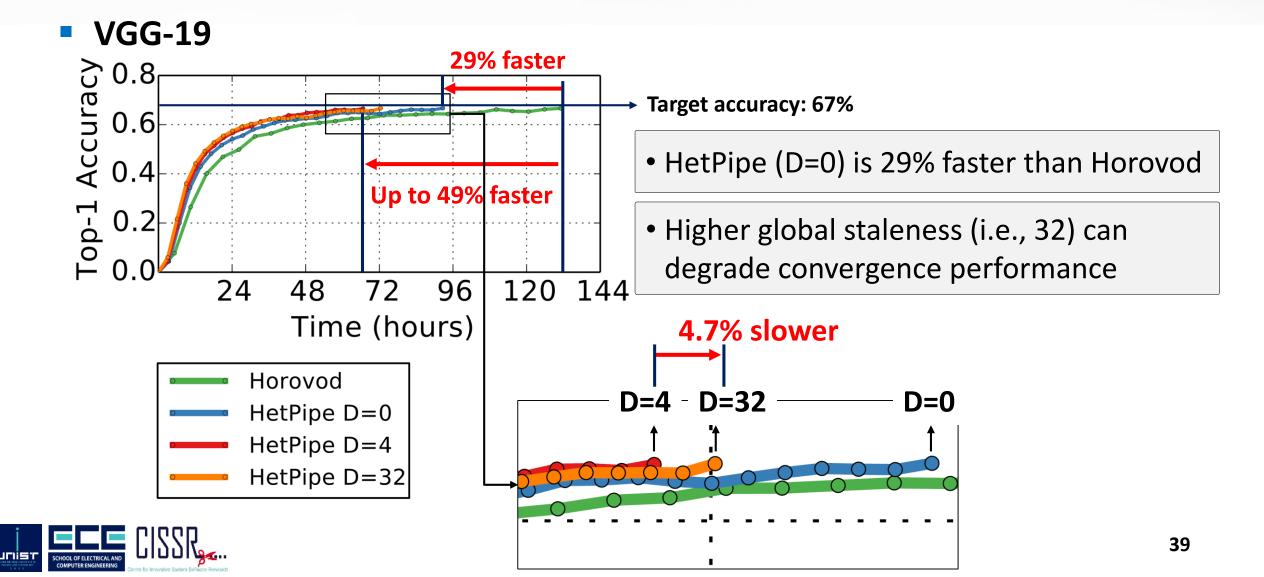

#### **Target accuracy: 74%**

7% faster

- HetPipe reduces straggler problem in heterogeneous environment
- Adding four more whimpy G GPUs, performance improves even more

#### **Convergence Results**

### **Not Presented But Discussed in Paper**

- Provide convergence proof of WSP
- Partitioning algorithm
- Performance of a single virtual worker
- Comparison to PipeDream

#### Conclusion

- HetPipe makes it possible to efficiently train large DNN models with heterogeneous GPUs
- Integrate pipelined model parallelism with data parallelism
- Propose a novel parameter synchronization model: WSP
- DNN models converge up to 49% faster with HetPipe

# Thank you!
