

POPS: Mitigation of DNS Cache Poisoning Attacks

Yehuda Afek,

Harel Berger,

Anat Bremler Barr

Usenix-Security Aug 14, 2025 Seattle USA

DNS Cache Poisoning is still kicking...

DNS Cache Poisoning Remains Pervasive — and Highly Dangerous

- CVE-2008-1447
- CVE-2008-1454
- CVE-2008-1146
- CVE-2007-2926
- CVE-2002-2211
- CVE-2002-2212
- CVE-2002-2213

poisoning bugs hits Symantec

COLA

The financial sector has emerged as the impact of DNS attacks.

[TuDoor Attack: Systematically Exploring and Exploiting Logic Vulnerabilities in DNS Response Pre-processing with Malformed Packets
 SP-2024 Xiang Li; Wei Xu; Baojun Liu; Mingming Zhang; Zhou Li; Jia Zhang]

PoPS

New Fast & Efficient

Detection & Mitigation

of ***all*** Statistical DNS Poisoning attacks

with 0 FN and negligible FP

PoPS

all Statistical DNS Poisoning attacks

1st Statistical

1. Standard Statistical attacks

2nd Fragment

2. Fragmentation attacks

3rd Out-of-Bailiwick

3. Out-of-Bailiwick attacks

We do not detect | mitigate
Session hijacking attacks:

1. MITM poisoning attacks
2. BGP hijacking attacks

High level DNS request

Client A

**Recursive
Resolver**

UDP !

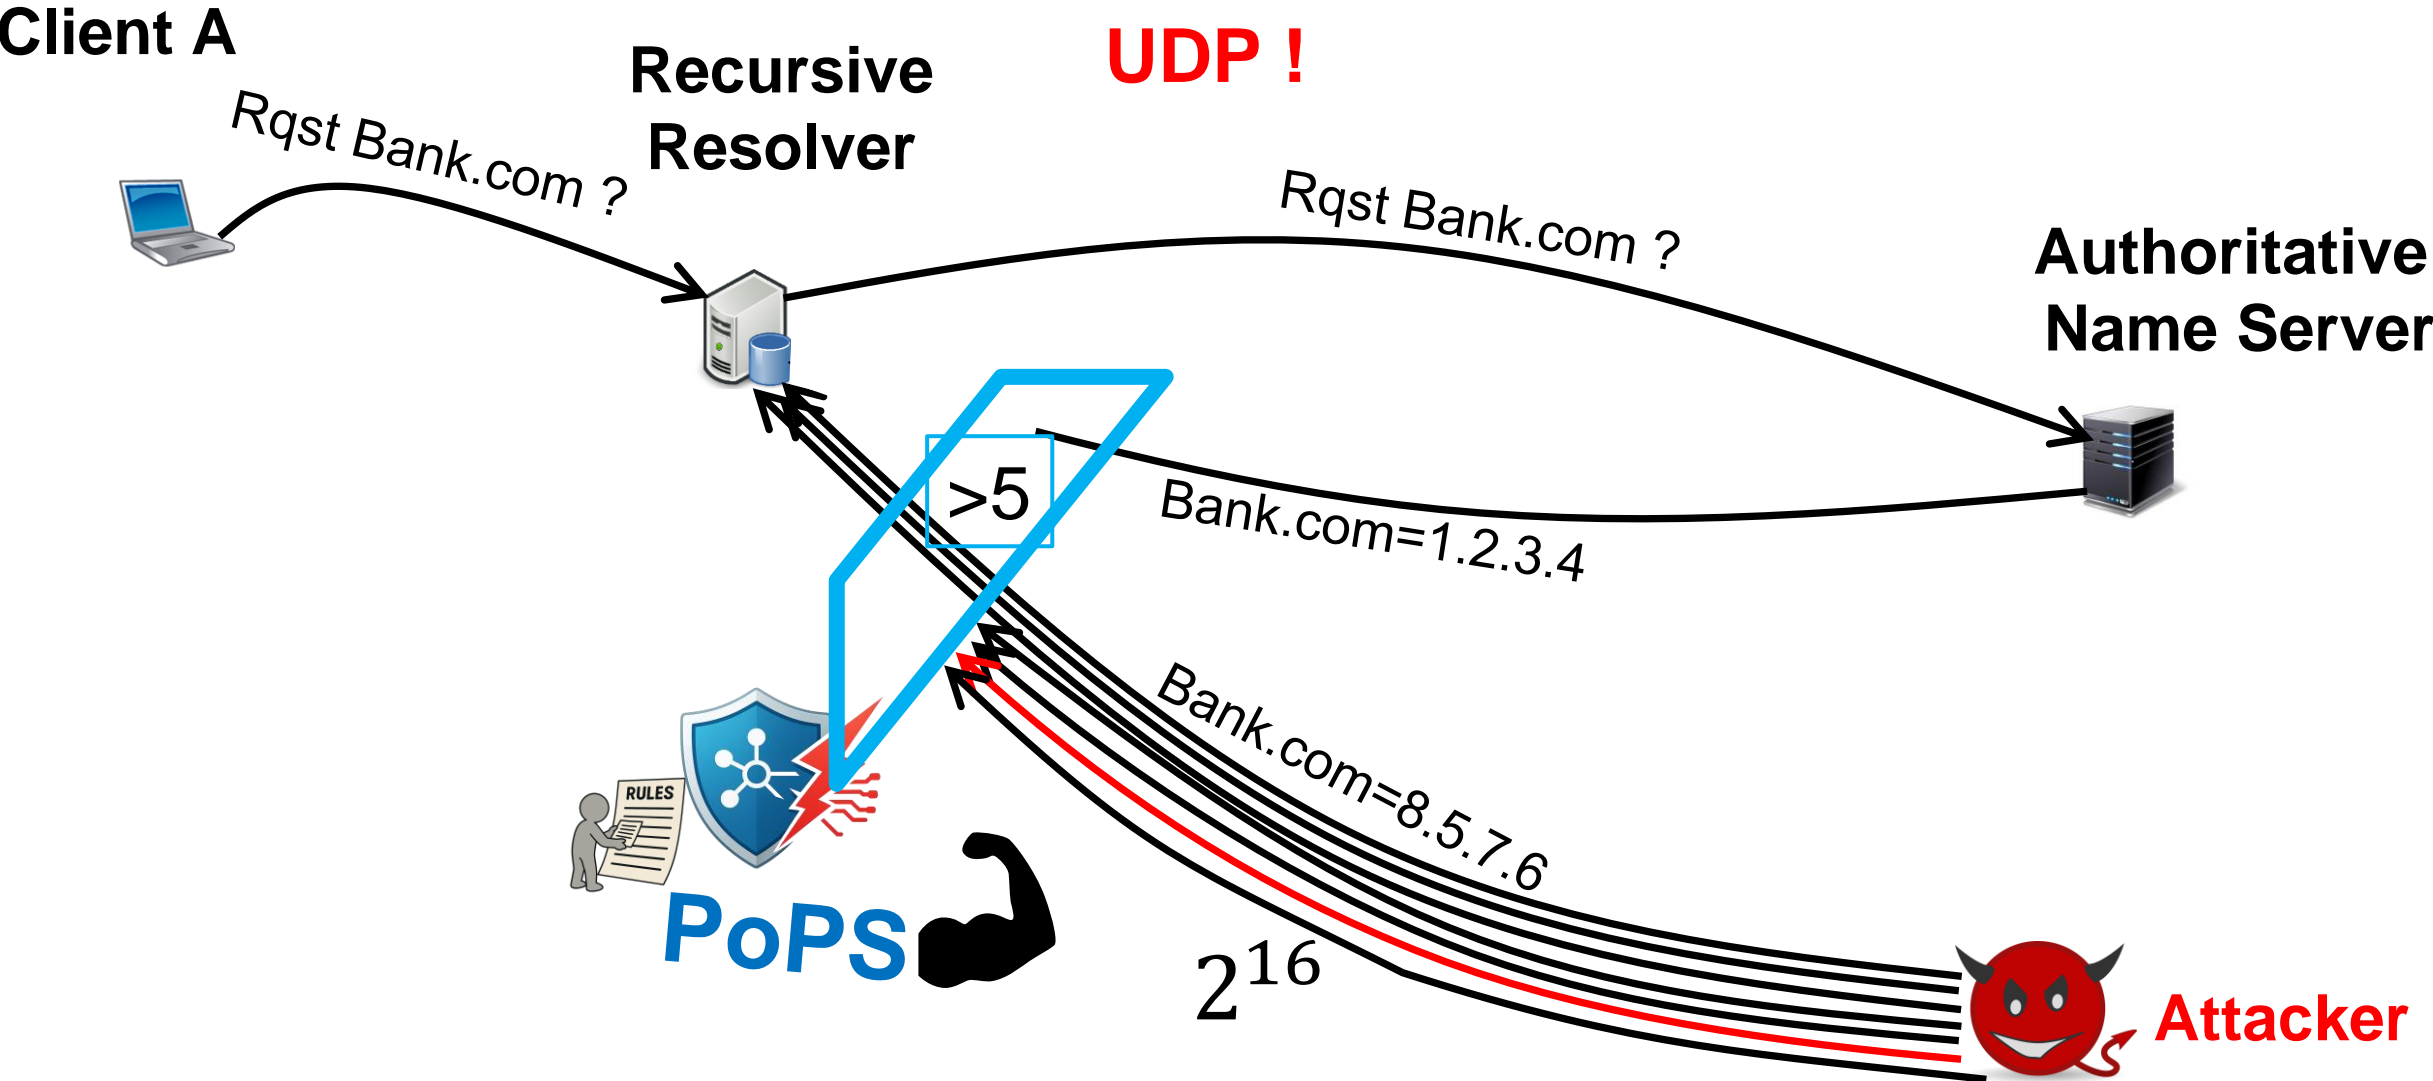

**Authoritative
Name Server**

Statistical Poisoning Attack

POPS Detection

POPS Mitigation

Client A

Recursive Resolver

~~UDP!~~

TCP!

Rqst Bank.com?

Authoritative Name Server

Rqst Bank.com ?

1.2.3.4

TCP!

Bank.com=1.2.3.4

Bank.com=8.5.7.6

PoPS

Attacker

?

PoPS

Statistical attacks

- Detection: **minimize false negatives (FN)** & **negligible false positive, 0.0076% (FP)**
 - Mitigation: **zero FN^{*}** & **zero FP**
-
- All together: **zero FN** & **negligible FP (0.0076%)**

In conclusion:

- Blocks 99.993% of attacks with **zero** false negatives!
- **Fast & efficient**

* Assuming resolvers respond \w TCP on TC bit
 (all large ones. > 97% [Moura et.al. 21] [Bhowmick et.al.23])

DNS Fragmentation Response

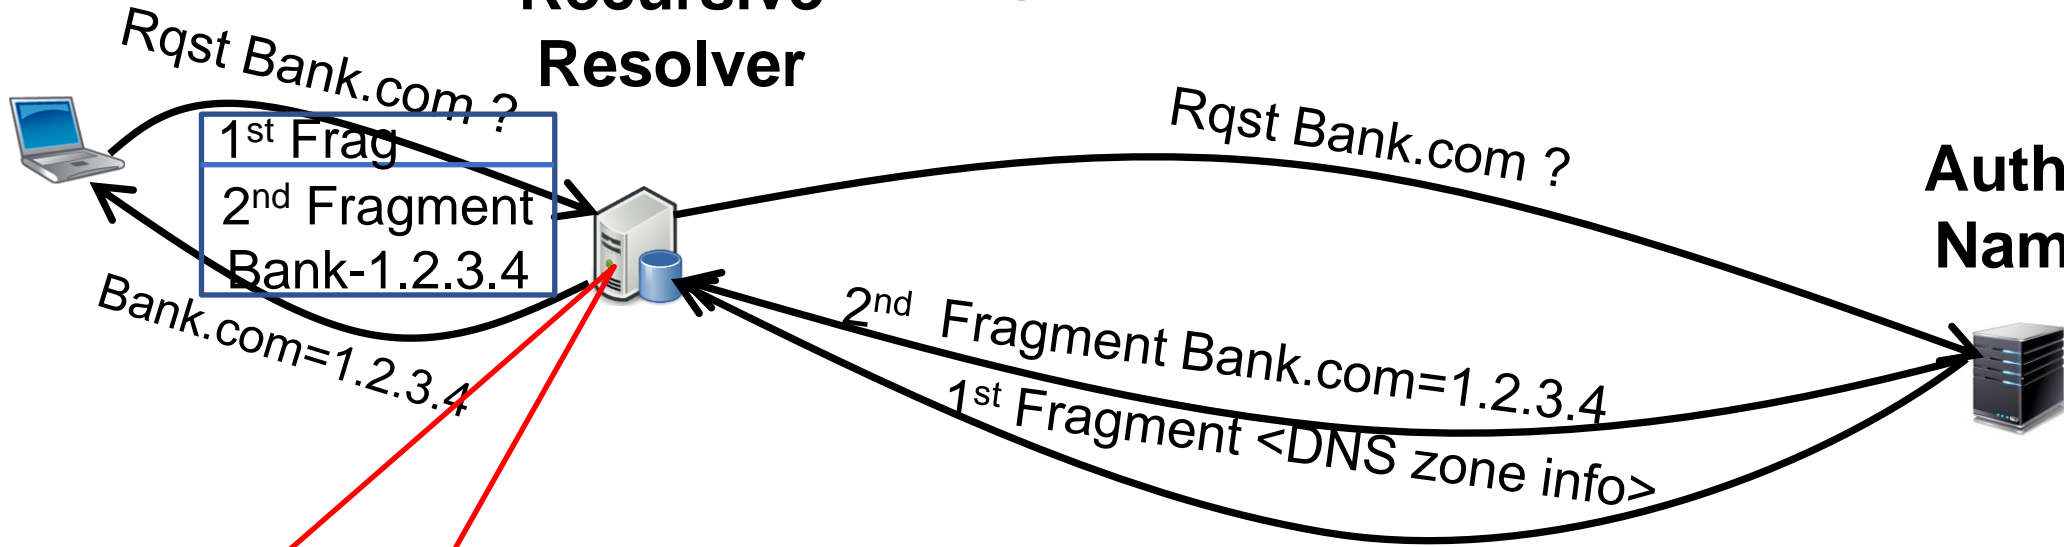

Fragments

UDP !

Client A

**Recursive
Resolver**

**Authoritative
Name Server**

1. IP-ID?
(e.g., per Dest)

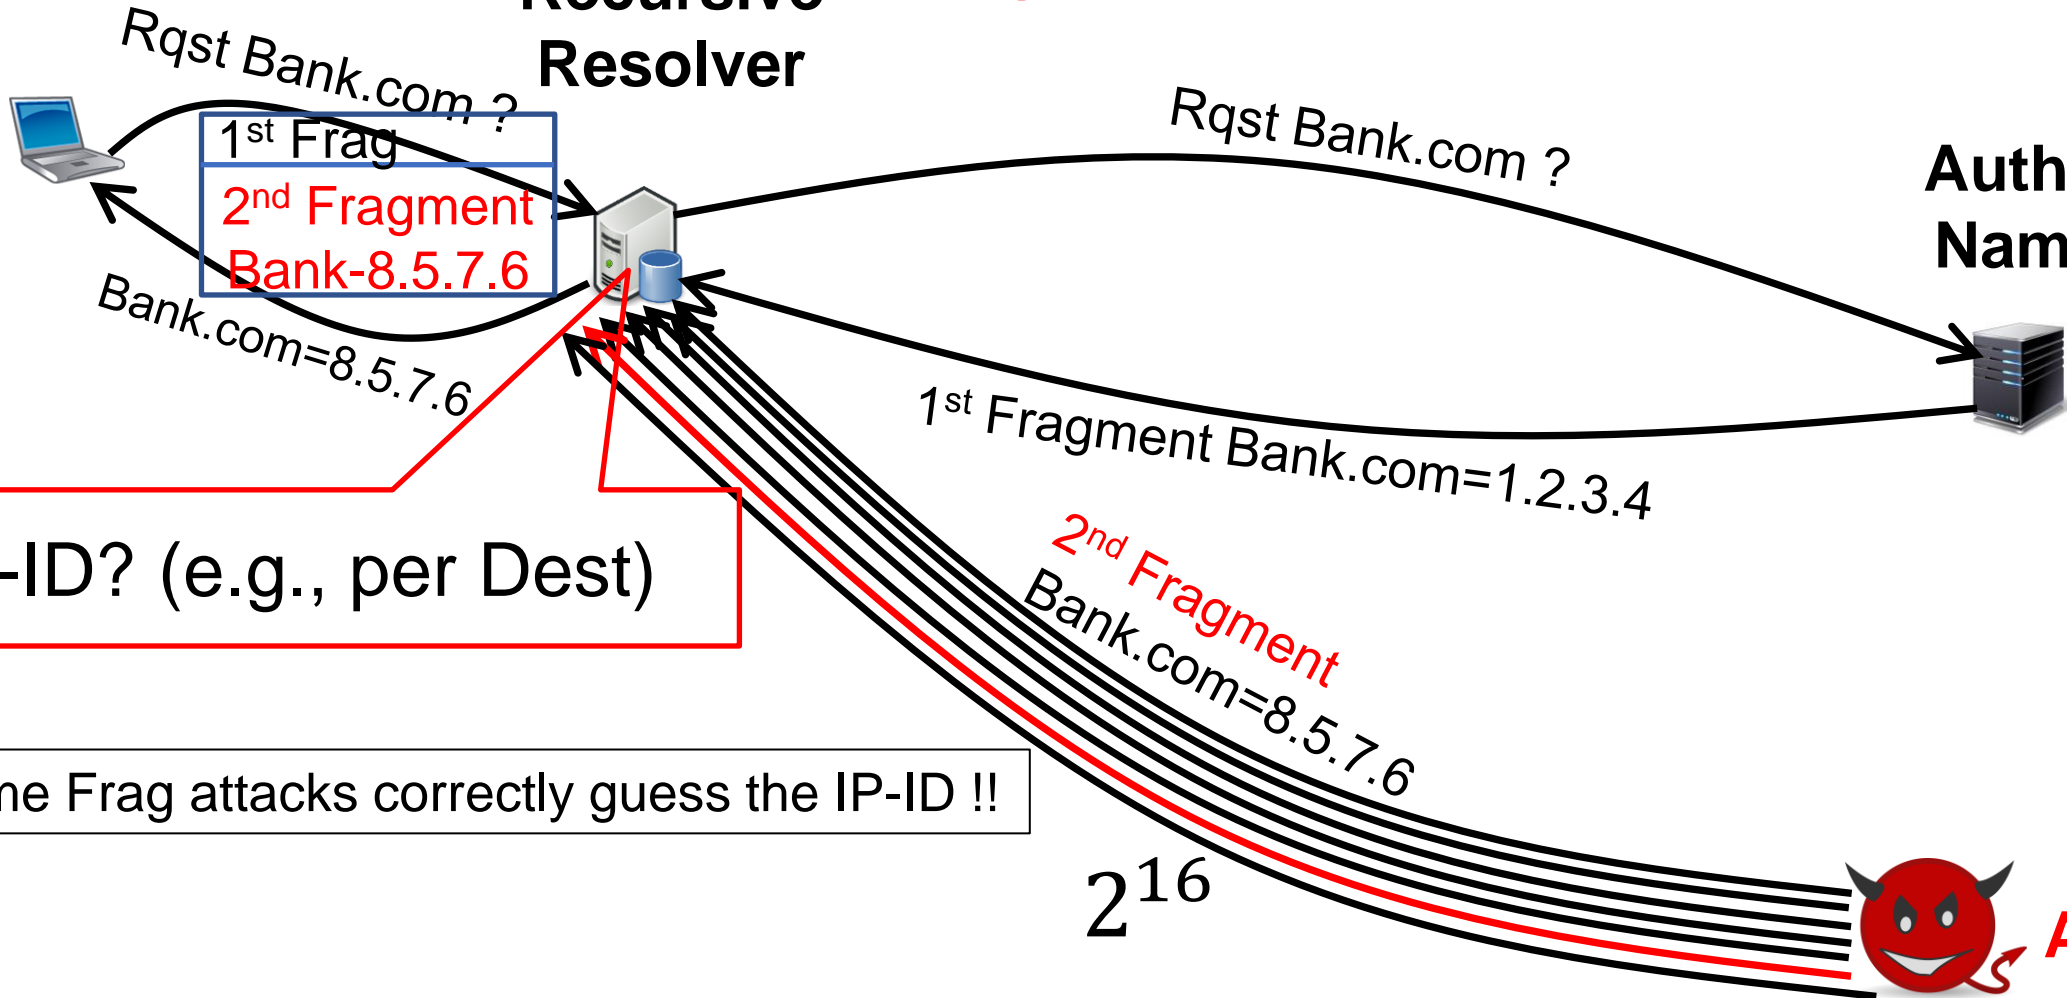

Fragmentation Poisoning Attack

Client A

Recursive Resolver

UDP !

Authoritative Name Server

IP-ID? (e.g., per Dest)

Some Frag attacks correctly guess the IP-ID !!

ns1.attacker.net

Add: ns1.attacker.net A 7.7.7.7

Deny all Out-of-Bailiwick responses

Rqst foo.bar.com ?

Attacker

Detection Rule (RI3) – glue RRs outside of target domain

PoPS 3 Detection rules

1st statistical

Rℓ1 >5 Catches attack after 5 packets!

- Using CMS, Minimum Memory (~4Kbit)

2nd Fragment

Rℓ2 - Fragmentation Attacks – any fragment.

3rd Out-of-Bailiwick

Rℓ3 - Out of Bailiwick Attacks – any out-of-bailiwick
= glue RRs outside the target domain

Detection Module vs. Attacks

Comparison to Suricata/Snort

Suricata & Snort

- Passive IDSs
- Cannot aggregate by domain name

POPS detection:

- 2x – 5x faster than Suricata/Snort
- 5%–10% of packets analyzed by Suricata/Snort
- Suricata/Snort 10x–20x more False Negatives than PoPS

Conclusions POPS:

- Simple Detection of DNS cache poisoning attacks (3 rules).
- Mitigation - TC Flag \rightarrow TCP, Data Erasure ~ 0 FN, 0 FP.
- POPS mitigation works with any detection method
various combinations are considered.

Thank you for listening!
