

# The Only Constant Is Change

14 Lessons from a 25-Year SRE Career

Andrew Ryan  
Production Engineer

SRECon Asia  
June 2023

25 years ago...

The brochure features a central image of a person holding a globe made of computer wires. To the right, the text reads: [ LISA '98 ] December 6-11, 1998 12th Systems Administration Conference Marriott Copley Place Hotel, Boston, Massachusetts. Below this, there are sections for Registration, Program at-a-Glance, Program Committee, Tutorials at-a-Glance (with sub-points: Overview & CEUs, Tutorial Instructors), Advanced Topics Workshop, Global LISA Workshop, Keynote Address, and Technical Sessions (with sub-points: Wednesday, Dec 9, Thursday, Dec 10, Friday, Dec 11). On the right side, there is a blue box titled 'Important Dates to Remember' containing 'Pre-Registration Deadline Friday, October 30, 1998' and 'Hotel Discount Deadline Monday, November 16, 1998'. Below this are two smaller blue boxes: 'Program at-a-Glance' and 'Registration'. At the bottom right, a large section titled 'An Invitation from the Program Chairs' contains the text: 'Learn to take advantage of the unique and innovative methods that sysadmins from around the world are using to manage their large scale systems.'

**[ LISA '98 ]**  
December 6-11, 1998  
**12<sup>th</sup> Systems Administration Conference**  
Marriott Copley Place Hotel, Boston, Massachusetts

**Registration**  
**Program at-a-Glance**  
**Program Committee**  
**Tutorials at-a-Glance**  
▪ Overview & CEUs  
▪ Tutorial Instructors  
**Advanced Topics Workshop**  
**Global LISA Workshop**  
**Keynote Address**  
**Technical Sessions**  
▪ Wednesday, Dec 9  
▪ Thursday, Dec 10  
▪ Friday, Dec 11

**Important Dates to Remember**  
Pre-Registration Deadline *Friday, October 30, 1998*  
Hotel Discount Deadline *Monday, November 16, 1998*

**Program at-a-Glance**      **Registration**

**An Invitation from the Program Chairs**  
**"Learn to take advantage of the unique and innovative methods that sysadmins from around the world are using to manage their large scale systems."**

**20 years ago...  
SRE was born**

The “SRE Bible”:

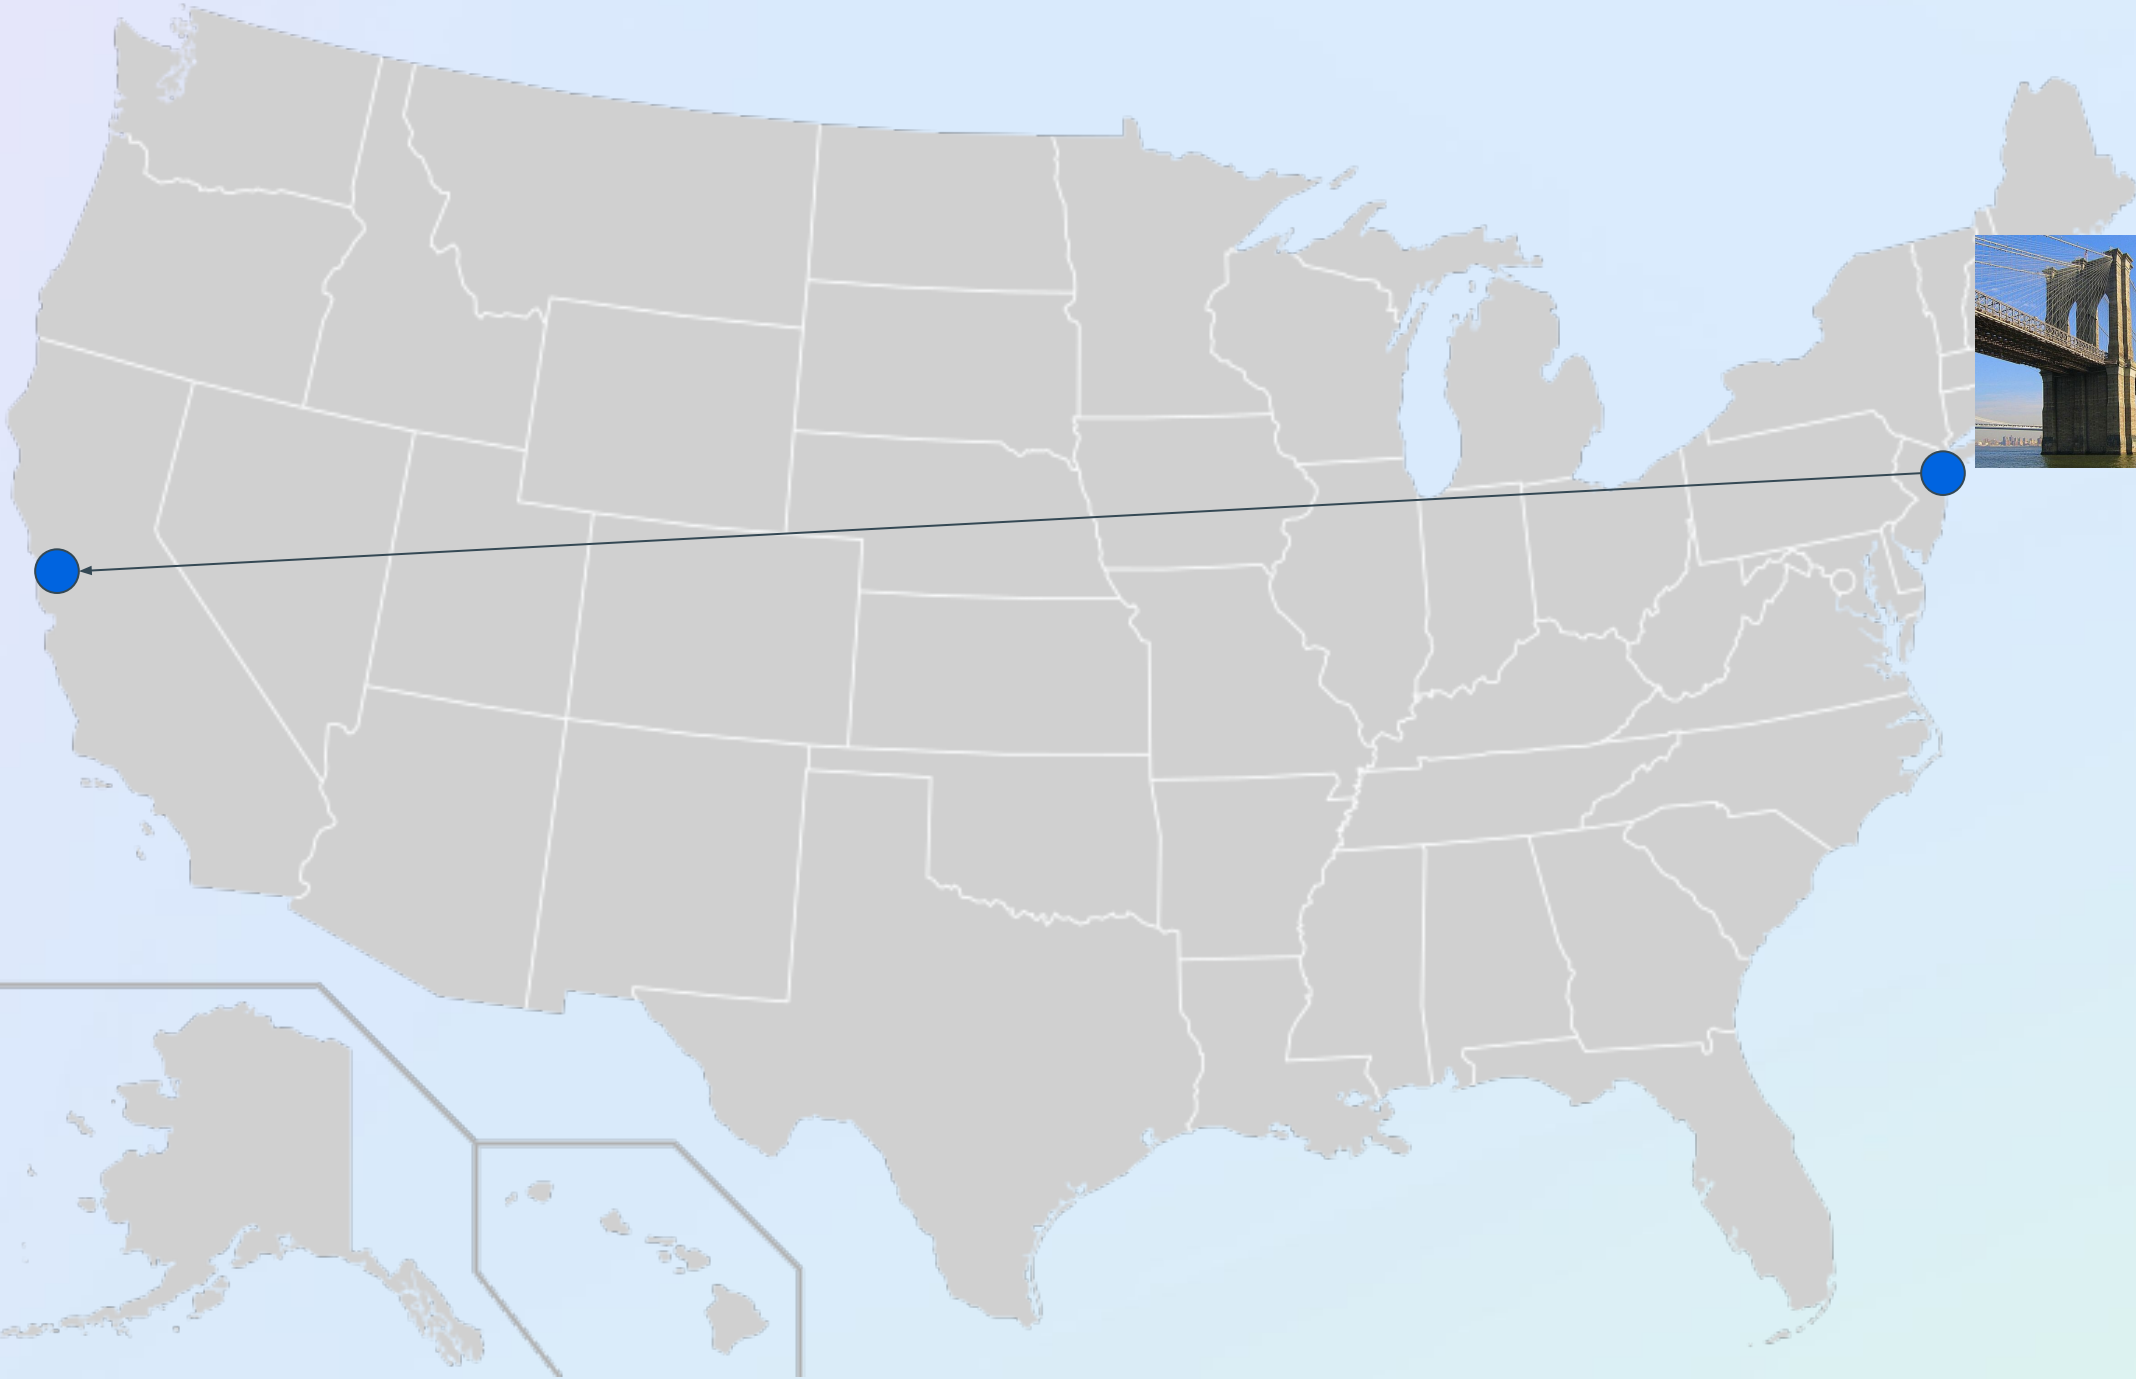

**Site Reliability Engineering: How Google  
Runs Production Systems**

by Beyer, Jones, Petoff, Murphy

Published by O’Reilly Books, 2016

## Lesson 1

The best SRE's often come from non-traditional\* backgrounds. Learn how to leverage yours.

\* "Traditional" meaning a background in computer science or software engineering

## Lesson 2

When you get offered a seat on a  
rocketship, take it

## Lesson 3

When no one's an expert, you can be an expert

## Lesson 4

Your moat of expertise isn't as deep or wide as you think it is

# The “25-year skills” for an SRE

## Lesson 5

Every SRE uniquely combines the three skill areas of People, Project and Technical. You need to be the best “you” that you can.

Me! With a larger  
“People” circle

# 25-year People skills for SRE

1. **Cooperating:** Can you get along with other people?
2. **Managing/Influencing:** Can you get groups of people to work together?
3. **Mentoring:** Can you teach people how to do what you do?

## Lesson 6

Always have mentors, and  
always try to find people to mentor

# Targeted mentorship

Getting the most out of mentoring

## 1. Visualizing the future

How did *<mentor>* get where they are in their career? Can I do that too?

## 2. Avoiding known pitfalls

What could I learn about my *<upcoming thing>* from *<mentor>* who has done something similar?

## 3. Learning a thing

How is *<mentor>* so good at *<thing I would like to be good at>* and can they teach me?

# 25-year Project skills for SRE

1. **Project planning:** Figure out how to do the thing
2. **Risk assessment:** What could go wrong?
3. **Project management:** Actually do the thing
4. **Incident management:** What happens when things go wrong

Incident management resources: <https://sre.xyz>

## Lesson 7

Project and incident management skills allow SRE's to turn “past mistakes” into “future successes”

# 25-year Technical skills for SRE

## 1. **Programming**: Interfacing with the computers around us

- C
- perl
- Bourne Shell
- awk/sed

- PHP
- Python
- Java
- Go
- C++

- Rust
- Hack
- ?

## Lesson 8

Over the course of your career you should expect to:

1. Master at least 2-3 programming languages
2. Become conversant in a new programming language every few years

# 25-year Technical skills for SRE

1. Programming: Interfacing with the computers around us
2. **Troubleshooting**: Finding and fixing broken things

 under pressure 

# **Single machine troubleshooting**

The USE Method

Systems Performance, Enterprise and  
the Cloud, 2nd Edition

Brendan Gregg,

Published by Addison Wesley, 2020

## **Distributed system troubleshooting**

### **Foundational concepts include:**

- Thundering herds
- Cascading failures
- Queue overloads
- Tail latencies
- Load balancing
- Load shedding
- Jitter
- ... and many more!

## Sociotechnical troubleshooting

- How can we release new versions of our software to our cluster without causing downtime?
- How can we safely launch a new feature to production?
- What is the best way to make our service resistant to outages from our cloud provider?

## Lesson 9

Master troubleshooting, under pressure, at least one of:

1. Single machine
2. Distributed systems
3. Sociotechnical systems

Grace under **pressure** = Study +  
Practice without pressure +  
Shadow with pressure +  
“Fly solo” with pressure

# 25-year Technical skills for SRE

1. Programming: Interfacing with the computers around us
2. Troubleshooting: Finding and fixing broken things under pressure
3. Providing the “Missing Manual”

What are the optimal config settings for this brand new hardware accelerator?

How do I scale past previous known limits?

## Lesson 10

# Provide the “Missing Manuals”

How do I launch this code production on a tiny budget in just a few weeks?

How do I operate this proprietary internal service?

# 25-year Technical skills for SRE

1. Programming: Interfacing with the computers around us
2. Troubleshooting: Finding and fixing broken things under pressure
3. Providing the “Missing Manual”
4. Know how and when to use duct tape

# Duct tape example 1: Drop filesystem caches

```
5 * * * * echo 1 > /proc/sys/vm/drop_caches
```

## Duct tape example 1a: “stfu” in Linux kernel on cache drop 🤪

[https://git.kernel.org/pub/scm/linux/kernel/git/torvalds/linux.git/tree/fs/drop\\_caches.c](https://git.kernel.org/pub/scm/linux/kernel/git/torvalds/linux.git/tree/fs/drop_caches.c)

```
if (write) {
    static int stfu;

    if (sysctl_drop_caches & 1) {
        iterate_supers(drop_pagecache_sb, NULL);
        count_vm_event(DROP_PAGECACHE);
    }
    if (sysctl_drop_caches & 2) {
        drop_slab();
        count_vm_event(DROP_SLAB);
    }
    if (!stfu) {
        pr_info("%s (%d): drop_caches: %d\n",
                current->comm, task_pid_nr(current),
                sysctl_drop_caches);
    }
    stfu |= sysctl_drop_caches & 4;
}
return 0;
```

# Duct tape example 2: Disable GC ; restart the server instead

## Dismissing Python Garbage Collection at Instagram

Instagram Engineering · Follow

👏 1.8K

💬 13

By dismissing the Python garbage collection (GC) mechanism, which reclaims memory by collecting and freeing unused data, Instagram can run 10% more efficiently. Yes, you heard it right! By disabling GC, we can reduce the memory footprint and improve the CPU LLC cache hit ratio. If you're interested in knowing why, buckle up!

## Lesson 11

Know how, and when, to use duct tape

## Lesson 1

The best SRE's often come from non-traditional\* backgrounds.  
Learn how to leverage yours

\* “Traditional” meaning a background in computer science or software engineering

# Career Directions For SRE's

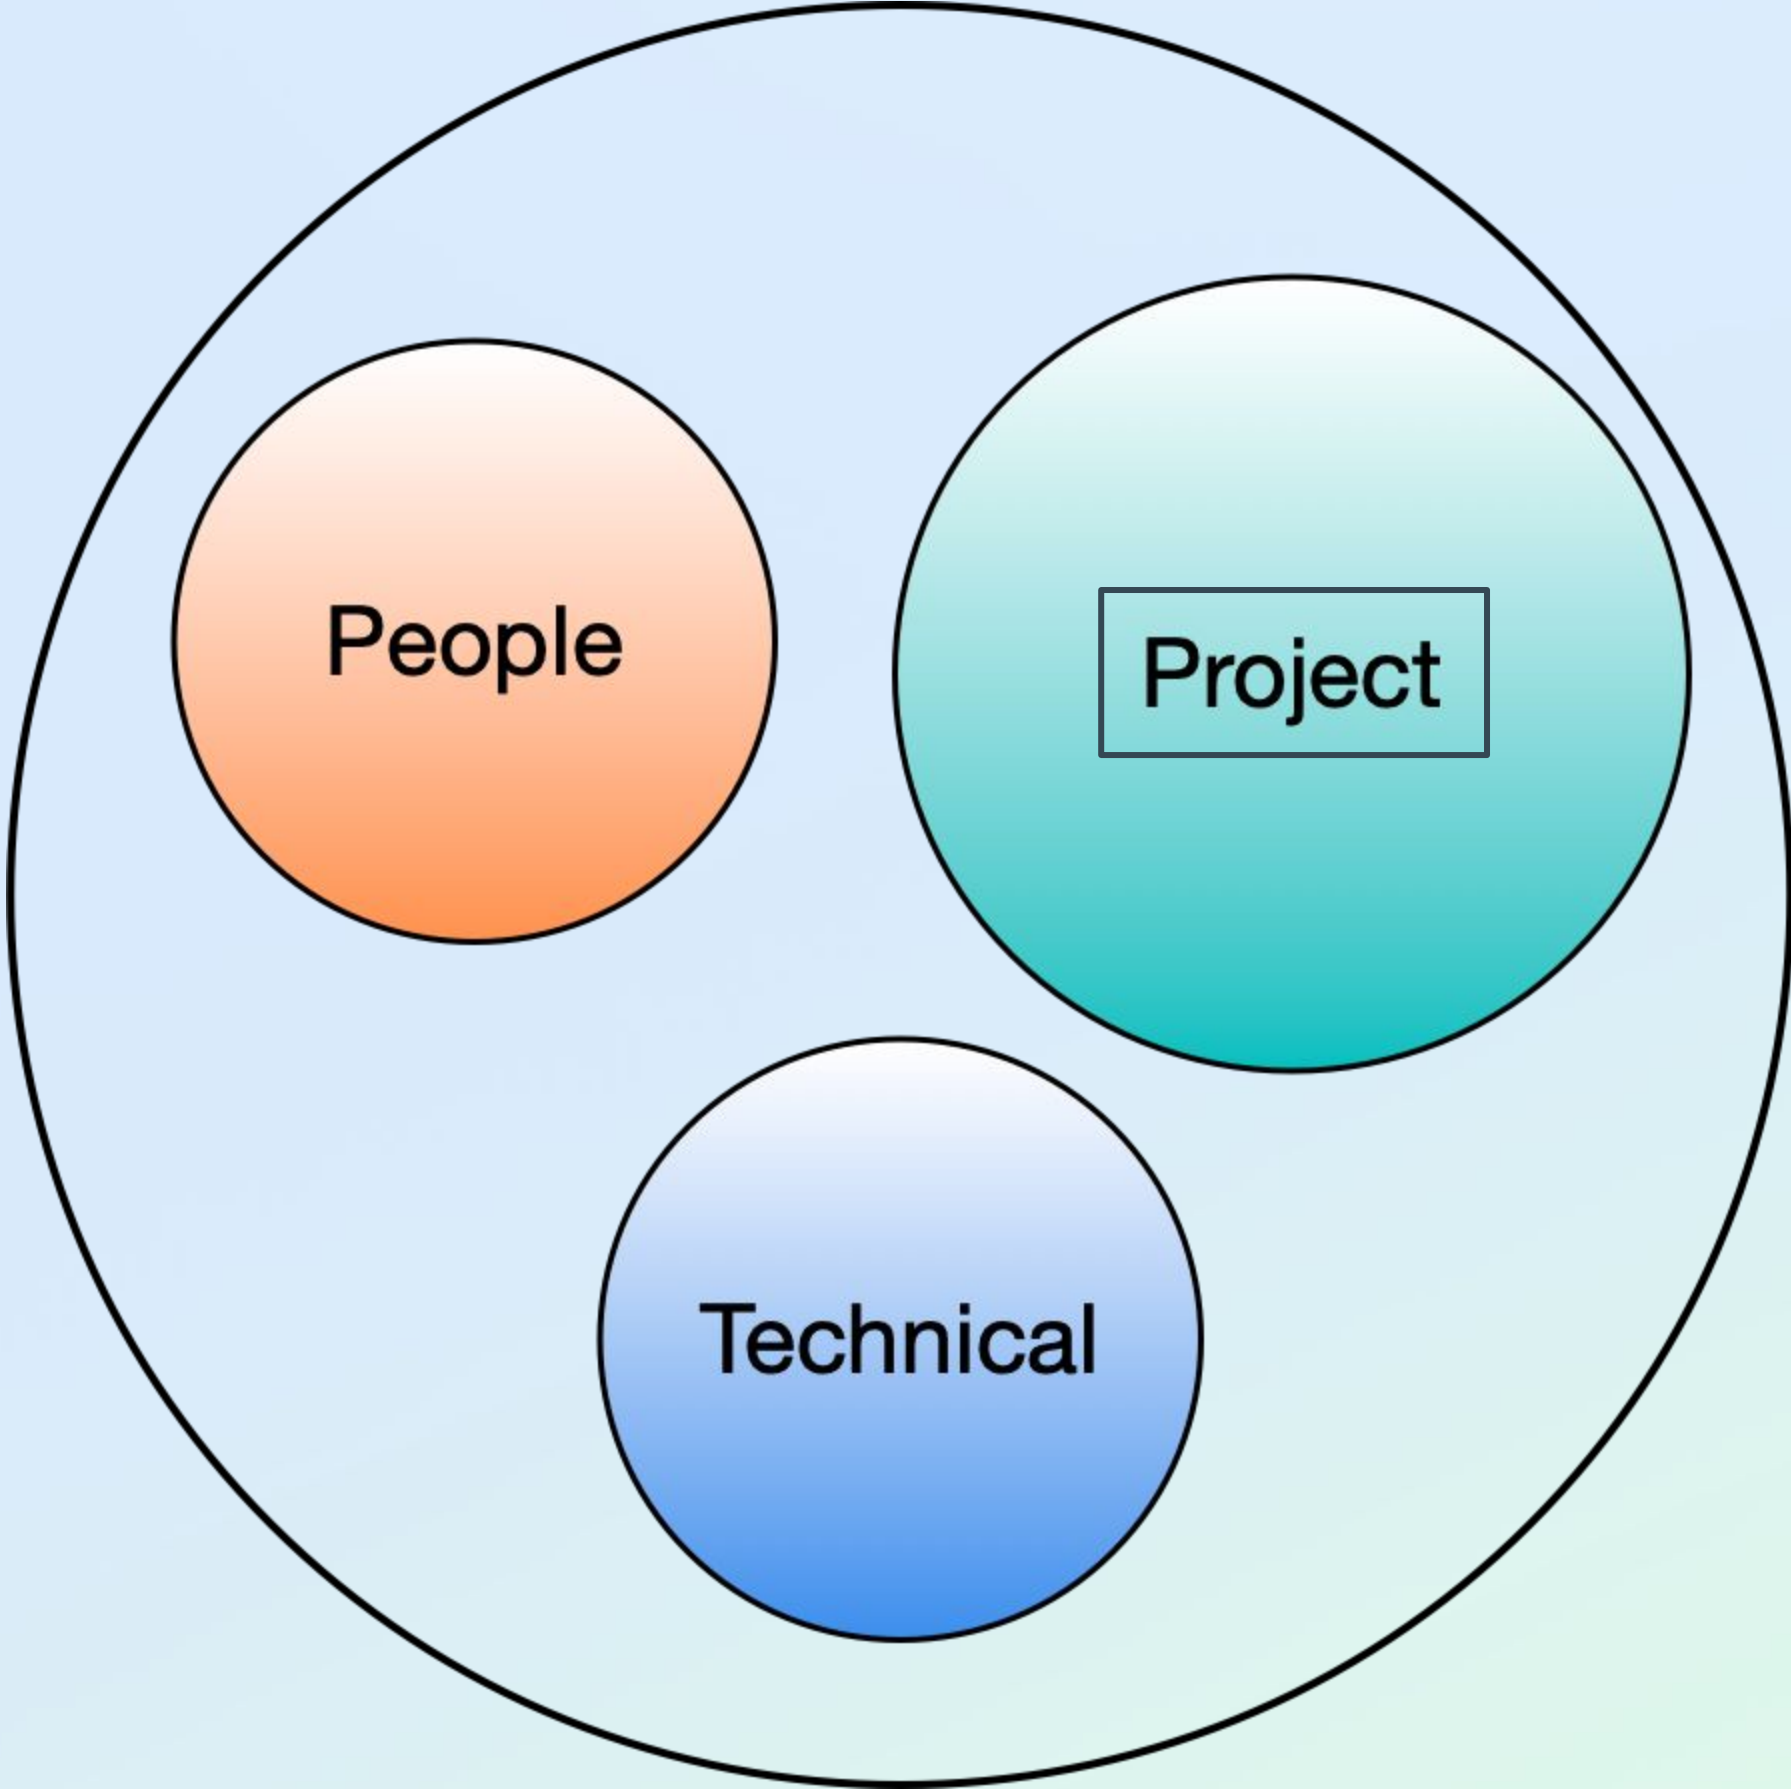

## Lesson 12

You will have many jobs in your life, and you may not always be an SRE

# The “25-year skills” for an SRE

# Project Manager

# Software Engineer

# People Manager

Recommended: Andrew Hatch “Confesions of an SRE Manager”  
<https://www.usenix.org/conference/srecon23americas/presentation/hatch>

# Tech Lead

## Lesson 13

Career changes to/from SRE are not  
“one way doors”

# SRE in 2043?

- Will SRE still exist in 20 years?
- Will AI take all our jobs?
- How can I “future proof” my career?

**Will AI take all the SRE jobs?**

**No...**

# **“AI-resistant” job paths**

1. Coordinating people
2. AI Values & Safety
3. Technology

# SRE Opportunity in AI

## Lesson 3

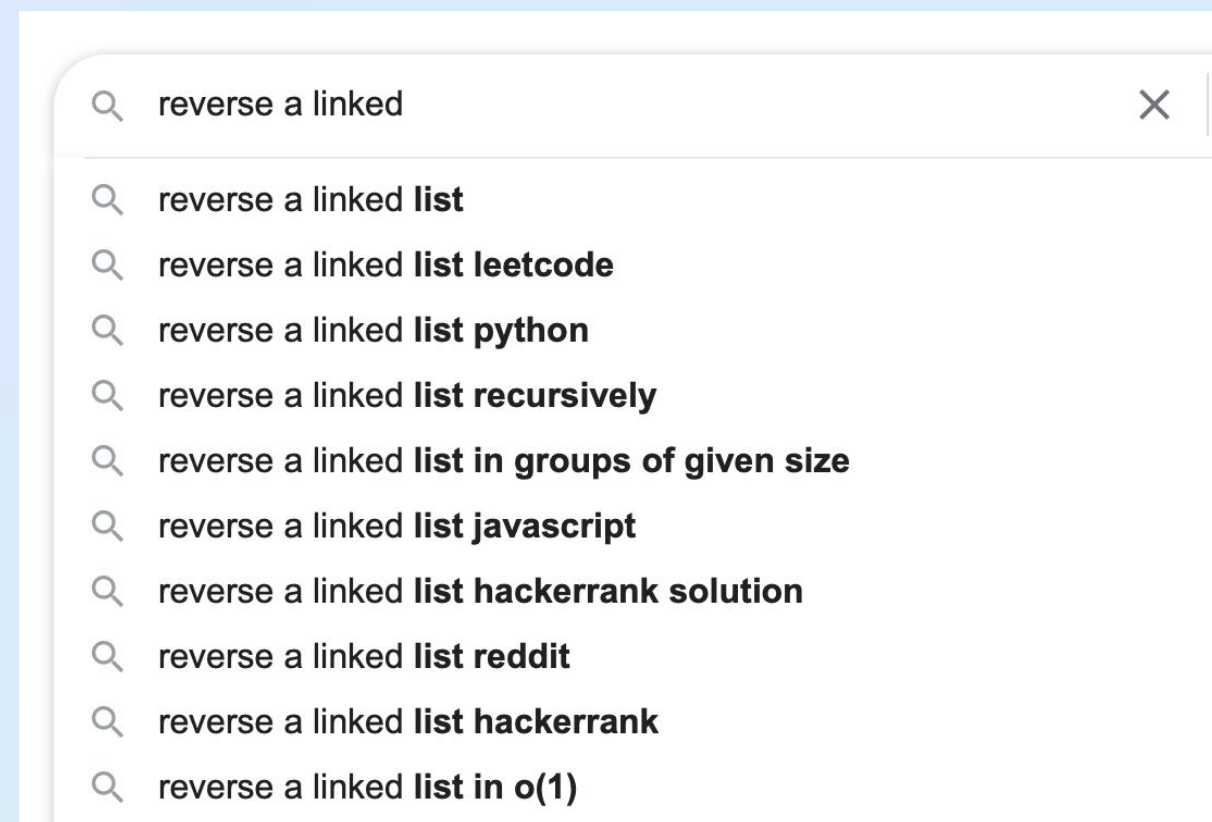

When no one's an expert, you can be an expert

# Lesson 14

## AI is not a fad: learn to use AI-based tools and technology or risk being left behind

The C Programming Language (aka "K&R")

Kernighan & Richie  
Published by Prentice Hall, 1988

```
> CodeBot, write a program in ANSI C to reverse a linked list in O(1)
```
